a most efficient
oral penicillin
... in a most
acceptable form

here is the first

READY-PREPARED Suspension
of potassium penicillin V

It's logical enough that the pioneers of Britain's penicillin V should be first again with another important penicillin development. For important indeed—to doctor and pharmacist alike—is the new 'Distaquaine' V-K Suspension. It is Britain's first *ready-prepared* suspension of potassium penicillin V, and can be dispensed without any preliminaries. It is pleasant-tasting, too, and is suitable for patients of every age. That's why you'll be seeing more and more prescriptions for . . .

Records Broken

WORK OF PATENT OFFICE IN 1959

EXCEPT for registration of designs, the business of the Patent Office during 1959 exceeded all former records. There were 44,495 applications for patents (42,277 in 1958); 23,025 provisional specifications were filed (22,725); complete specifications numbered 33,653 (30,878), and 18,157 (18,531) patents were sealed. Patents fees amounted to £1,332,617 (£1,231,814); designs fees £20,598 (£19,541) and fees for trade marks amounted to £133,656 (£118,397). These details were given in the seventy-seventh report of the Comptroller-General of Patents, Designs, and Trade Marks (H.M. Stationery Office, 1s. 6d.). The Comptroller states that because of difficulties in recruiting qualified staff it had not been possible to keep pace with the continually increasing number of complete specifications received. By the end of 1958 there were 36,718 unexamined complete specifications, yet at the end of 1959 the arrear was no more than 37,068, despite the increased number submitted. Dealing with the trend of invention during 1959 the Comptroller refers to the development of steroids having improved physiological properties. In other synthetic drugs, the chief activity was in those relieving pain, especially in rheumatic conditions, for relieving spasmotic contractions of the muscles, and for lowering blood pressure. He refers to the isolation of Cephalosporin C. During the year 8,879 trade marks were advertised (7,944 in 1958); 6,145 (6,508) trade marks were registered in part A and 842 (742) were registered in part B. The number of trade marks registered in 1959 was artificially low because the printing dispute interfered with the advertising of applications. The increased interest in trade marks was thought to arise from the increased advertising of consumer goods and a general tendency to seek a trade mark for each new line rather than for a manufacturer to cover a whole range of goods with one trade mark. There were 951 trade marks advertised in class 5 of the register (pharmaceutical, veterinary and sanitary substances, infants' and invalids' foods, etc.) and 711 marks were registered. The figures for 1958 were 816 and 732.

Exhibition Success

NEW YORK DOLLAR DRIVE

THE British Exhibition, New York, during June was said, by Lord Rootes (one of the joint exhibition chairmen) upon his return, to have been an outstanding success. Many American companies sent visitors and one company took 1,500 tickets for the use of

its staff. Registered buyers totalled over 30,000 and the Dollar Council and Federation of British Industries' joint stand had 10,000 inquirers who left their names and addresses. There was a vast market for British goods on the Pacific Coast, Lord Rootes said, and he was pleased to report the receipt of a wide range of inquiries from many parts of the United States. Competition from European, American and Japanese manufacturers however was fierce and considerable effort was required from British business men to extend their business. At the Northern Ireland Development Council's stand on the closing night it was announced that two big American companies plan to expand their plants in Northern Ireland. They are E. I. Du Pont De Nemours & Co. and the Chemstrand Corporation.

Medicines Legislation

BOROUGH COUNCILS' PROPOSALS

THE Association of Municipal Corporations, representing borough councils, has informed the Interdepartmental Working Party on Legislation concerning Medicines, of its concern at the "increasing tendency" of drug firms to issue drugs and capsules that can readily be confused with sweets. It recommends that there should be standardisation of the appearance of drugs and that surfaces of tablets and capsules be marked so that persons with a key to these markings can

readily identify them. The association also refers to a tendency from time to time for substantial accumulations of medicines to occur in patients' homes and private maternity homes which may be a temptation to nursing staff for relief of personal pain. On this, the association's memorandum states: "We consider that better control would be exercised in the prevention of possible drug addiction among nursing staff by arrangements whereby midwives use their own pethidine, etc., which is replenished by the issue of prescriptions equivalent to that used by their patients. Some stricter control of the drugs of addiction would seem to be necessary."

It suggests no amendments so far as sampling is concerned. In its view, both the Pharmacy and Medicines Act, 1941 and the Food and Drugs Act, 1955, give adequate cover to either deficiencies in ingredients or labelling offences. But it believes that modification is necessary in Section 135 of the Food and Drugs Act, 1955, to deal with cases where the substance sold is not a food or a drink in the accepted sense, and which does not come under the heading of a drug.

Brush Manufacturers

DISCUSS COSTS AND PRICES

THE rising cost of Chinese bristle, and the inevitable increase in the price of certain brushes, were among items discussed by the delegates at the annual conference of the British Brush Manu-

DUKE SEES PHARMACEUTICAL EXHIBITION: Mr. Herbert Palmer (president, Association of British Pharmaceutical Industry, right) was presented to the Duke of Edinburgh, whom he conducted round the exhibition of pharmaceutical products at the annual meeting of the British Medical Association in Torquay on June 20.

facturers' Association at Llandudno recently. Mr. R. A. J. Palmer (president) said that he felt that manufacturers had no alternative but to increase their selling prices, as any delay in doing so must inevitably weaken the financial structure of the industry. In his address to members, he referred to the Restrictive Trade Practices Act, and the rumours that the right of manufacturers to fix the retail selling price appeared to be questioned. He also referred to the fact that the Act was being interpreted in such a manner as to make it extremely difficult for any industry to justify their normal trade practices, and urged that efforts should be made to obtain an amendment so that agreements could be upheld if they were shown to be not contrary to the public interest.

Antioxidants in Food

REGULATIONS TO BE REVIEWED

THE Government is to review the Antioxidant in Food Regulations, 1958, and the Antioxidant in Food (Scotland) Regulations, 1958. The main points in the regulations to be considered are the kinds of antioxidants to be permitted, the foods in which they may be used, the maximum allowance for permitted antioxidants, and labelling requirements. Before deciding whether, and to what extent, changes are necessary, the Government will give full consideration to any representations made by interests concerned. Such representations should be addressed to the assistant secretary, Food Standards Division, Ministry of Agriculture, Fisheries and Food, Great Westminster House, Horseferry Road, London, S.W.1, or to the secretary, Department of Health for Scotland, St. Andrew's House, Edinburgh, 1, to arrive not later than December 31.

National Insurance

GRADUATED CONTRIBUTIONS BY P.A.Y.E.

EMPLOYERS throughout Great Britain are to receive a four-page leaflet outlining the arrangements for collecting the graduated national insurance contributions from April 1961. Stamps and cards, as well as the other approved methods of payment, will continue to be used for paying the flat-rate contributions due for all employees. But the graduated contributions for those employees who are earning over £9 a week (and who are not contracted out of the graduated contributions and pensions) are to be collected through the P.A.Y.E. system in association with income tax and paid with the monthly tax remittance.

Mission from Cairo

RENEWING CONTACTS WITH BRITAIN

AT the invitation of the Board of Trade a party of United Arab Republic businessmen has been visiting Britain. The purpose of the mission is to renew trade contacts and examine the prospects of increasing trade both ways between the United Kingdom and the United Arab Republic. The tour follows a visit to the U.A.R. by a party of British businessmen earlier this year

for a similar purpose. The mission consists of nine members and eight advisers under the leadership of Mohamed Rouchdy (chairman and managing director, Egyptian Bank Misr), and represents a wide range of trading interests, including pharmaceuticals.

Retail Sales

BOARD OF TRADE FIGURES

RECENTLY issued Board of Trade statistics show that sales of chemists' goods by independent retailers in April were 7.2 per cent. higher than in March and 4 per cent. higher than in April 1959. Multiple retailers' sales were 10.4 per cent. higher in April than in March and 18 per cent. higher than in April 1959. Sales by Co-operative societies were 5.8 per cent. higher in April than in March and 3 per cent. higher than in April 1959. The figures do not allow for receipts under the National Health Service.

Washing Facilities

FACTORY REQUIREMENTS EXTENDED

FROM August 1 factory owners and occupiers in Great Britain will have to include running hot and cold or warm water among the facilities for washing for employees under the Factories Act, 1959 (Commencement No. 2) Order, 1960, made by the Minister of Labour on June 21. At the same time the Minister laid before Parliament the Washing Facilities (Running water) Exemption Regulations, 1960. These exempt until August 1, 1961, all factories employing five workers or less from the requirement to provide running water for washing.

Dangerous Drugs Act

AN AUTHORITY WITHDRAWN

AUTHORISATION to be in possession of or to supply or prescribe Dangerous Drugs has been withdrawn from Leonard William Robinson, 228 Stonor Road, Birmingham 28.

IRISH NEWS

THE REPUBLIC

Ghanian Pharmacist

FIRST AFRICAN TO QUALIFY IN DUBLIN

THE distinction of being the first African to qualify as a pharmaceutical chemist — and as an optician — in Ireland has fallen to Julius Tetteh Larnor Darko. Aged twenty-six, Mr. Darko was born in Odumase-krobo, Ghana, where his parents were engaged in the cocoa plantations that are the main source of Ghana's wealth. Mr. Darko received his primary education at Akro State School, and completed a five-year

secondary course at Achimota College, a few miles from Accra, in 1950. Famous ex-students of the school include the Prime Minister of Ghana (Dr. Kwame Nkrumah) and the Minister for Finance (Mr. K. A. Gbedema). In 1951 Mr. Darko was a teacher at Akro school, but was strongly attracted to pharmacy and in 1952 joined the West African Drug Co., Ltd., Accra, as a pupil. Two years later he came to Dublin to pursue his pharmaceutical studies in the College of Pharmacy, Shrewsbury Road, serving an apprenticeship with Hayes, Conyngham & Robinson, Ltd., Grafton Street. He took his finals in July 1959 and in February. At present he is at University College Hospital, London, where he is gaining further practical experience. During his pharmacy course Mr. Darko also took a course in ophthalmic optics in the College of Technology, Kevin Street, Dublin, and afterwards gained practical experience with Newbold (Ireland), Ltd. His interests include dancing, hockey and soccer, and he is also a keen photographer. He intends to return to Ghana in the Autumn.

IRISH BREVITIES

THE NORTH

MR. H. West (Parliamentary Secretary to the Minister of Agriculture for Northern Ireland) was present at a luncheon on June 15 to mark the completion of a new Sanatogen plant recently erected at Coleraine, co. Derry. On his arrival he was met by Sir Clavering Fison (chairman of the Fison group) and other directors.

A "MURDER" hunt, organised by the social sub-committee of the Associates' Section, Ulster Chemists' Association, held on June 15, was won by Mr. W. A. Hall. Second was Mr. G. Bryans.

OVERSEAS NEWS

BELGIUM

Co-operative Chemists' Movement

BELGIAN Co-operative Pharmacies group report for the year recently ended shows that there are 249 pharmacies in the group or eight more than in the previous year. The group employs 1,301, of which 257 are qualified. In addition 38 optical departments are operated.

FRANCE

New Drug Rules

A NEW law introduced in France recently requires that drug producers obtain two official permits before they can manufacture or sell pharmaceuticals. The first permit, covering existing requirements for the drug itself, requires additionally, test data verifying the formula by qualitative and quantitative analyses. The other permit is concerned with the suitability and adequacy of the manufacturing operation and approval must be got before marketing can begin. Producers, however, have now only to show that a drug is beneficial to health whereas formerly they had to prove that their product was new or was used for a new purpose. A drug patent system is also being implemented.

NEWS IN BRIEF

THE Board of Trade is considering an application for the removal of the import duty on aluminium lithium hydride.

To appear in mid-July is the first issue of *Chemotherapy Review*, successor to *British & Overseas Pharmacy & Medicine* (which it incorporates), first published in its original form by the British and Colonial Druggist, Ltd., in the 1880's.

THE European Free Trade Association (Origin of Goods) (Amendment) Regulations, 1960, published June 24 (S.I. No. 1043), make certain minor additions and amendments to the European Free Trade Association (Origin of Goods) Regulations 1960 (see *C. & D.*, May 7, p. 528).

MANY of the sixty exhibitors at the Laboratory Apparatus and Materials Exhibition, held at the Royal Horticultural Society's New Hall, Westminster, London, S.W.1, during June 20-23, were familiar to pharmacists. It was the first exhibition dealing primarily with laboratory equipment and a wide variety of furnishings, scientific apparatus, chemicals and glassware was on show.

THE Association of British Manufacturers of Agricultural Chemicals, has issued a booklet showing the provisions of the Pharmacy and Poisons Act 1933, and the Poisons Rules 1960, relating to the sales of insecticides, fungicides, weedkillers and rodenticides. The booklet replaces the chart formerly issued by the Association. Copies may be obtained from the offices of the Association, Cecil Chambers, 86 Strand, London, W.C.2 (three shillings each post free; cash with order).

A DRAFT Statutory Instrument has been prepared amending the National Health Service (Superannuation) Regulations, 1955. It provides for the making, by employing authorities, of a supplementary contribution towards the cost of superannuation benefits provided under the National Health Service superannuation scheme. Another change is to restrict the right to receive interest on superannuation contributions in certain circumstances when employees leave the service. The proposed title is The National Health Service (Superannuation) (Amendment) Regulations, 1960. A similar draft Statutory Instrument has been prepared for Scotland.

A NUMBER of cameras were stolen from Evans Medical, Ltd., Ruislip, Middlesex, on the night of June 27-28. The following are the numbers of Ilford Sportsman cameras, Pronto 2-8, that were taken: C.123286, C.128455, C.123288, C.123280, C.123303, C.128426, C.123298, C.116696 C.128441, C.123305, C.128433, C.115509, C.128460, C.128430, C.144008, C.144000, C.143992, C.143977, C.143995, C.144017, C.144002, C.143996, C.143968, C.116949, C.115921, C.116695, C.116689, C.128585, as well as a quantity of Ilford Sportsman Vario 2-8 cameras the following were also stolen:—Ilford Sportsman cameras, Pronto SVS 2-8: D.129498, D.129536, D.142178, D.129501, D.129494, D.142183, D.129474, D.129505, D.152888, D.143454, D.143548, D.142905, D.142922, D.129504.

TOPICAL REFLECTIONS

By Xrayser

Normality

Those who live in these islands find some difficulty in appreciating the situation of the Australian who, perchance, celebrates Christmas, with its traditional fare, in a temperature reaching the nineties. Something of the same feeling arose in September of last year, when the Annual Special Issue of the CHEMIST AND DRUGGIST made its bow while russet leaves drifted gently to the ground, for readers had become accustomed to receiving their copies on or about midsummer's day. The situation has reverted to normal this year, the reader having just enough time to glance at the Press reports from Wimbledon and Lord's before the postman arrives with the treasure which alone is worth the annual subscription. Such is habit and tradition. But not for the first time I pictured the possibility of such a change in our climatic conditions as to permit of the arrival of pharmacy's annual feast of good things on a morning when icicles hang by the wall, and one could look forward to pulling up an armchair to the fire on a long dark evening and surrendering oneself to the contents while the snow drifted in the outside world. (I am assuming, you will notice, that nothing short of a climatic upheaval could bring this about.) Still, it has been pleasant to browse through the fascinating material in a deckchair, with no competition from swollen Christmas numbers decorated with holly, robins and bobsleighs.

The contents

Missing, alas, is the name of Dr. Charles Singer, who, for many years, adorned the subject of medical and pharmaceutical history, and whose contributions were of such outstanding quality and erudition. His death is a loss to pharmacy, but past issues of the annual give permanent and abundant evidence of his gifts. (Incidentally, it occurs to me that those studying that part of Section K of the revised examination syllabus relating to pharmaceutical history might well find much material in the editions of the Annual Special Issue.) But, despite the loss of Dr. Singer, there are fortunately other historians of enthusiasm and knowledge, whose work is displayed to advantage in the Annual Special Issue. I was reminded, on reading the article of Professor McKinney on early tranquillisers (and, possibly, anaesthetics) of the difficulties faced by Professor Sir James Y. Simpson when he introduced chloroform into his practice. The strongest antipathy was shown by the clergy, who denounced the use of anaesthesia as an interference with the laws of Providence! Simpson, an extremely religious man himself, reminded his critics of the scriptural occasion when Adam was put into a deep sleep for the removal of a rib. Simpson's interests were wide and varied, and he was an antiquarian and archaeologist of the highest rank.

Apprenticeship

In a paragraph last week, I referred briefly to apprenticeship and practical training. The article by "Galenethical" (p. 795) must have brought back memories to many who learned the elements of their craft close on forty years ago. It may be that much of what your contributor found himself compelled to do was of little academic value in the examination room, but the product of such a variegated environment was essential knowledge in the whole vast field of what constituted retail pharmacy. No college could have taught him more than a fraction of the information acquired during three formative years and, despite the hardships encountered, the author must have had occasion to be grateful for the experience gained. It is manifestly impossible to range over the whole of the delights of the Annual Special Issue, but I feel sure that your readers will devour the contents gratefully, and that the volume will find its way on to the bookshelf in company with previous numbers. A "run" of such numbers constitutes a priceless anthology of the history of pharmacy, to which the enthusiast may return with the greatest profit on any occasion. The material is for all time.

Dental Prescriptions

A NEW LIST OF DRUGS

A NEW list of drugs that a dentist may prescribe on forms EC14 for patients under the National Health Service is included in the National Health Service (General Dental Services) Amendments Regulations, 1960, which came into operation on July 1. The complete list is as follows:—

Acetylsalicylic acid	Phenol
Alum	Potassium bromide
Benzoic acid	Potassium chlorate
Borax	Potassium permanentanate
Boric acid	Quinine sulphate
Caffeine	Sodium bicarbonate
Calcium gluconate	Sodium chloride
Calcium lactate	Sodium borate
Chloral hydrate	Sodium sulphite
Clove oil	Tannic acid
Magnesium sulphate	Zinc chloride
Mercurous chloride	Zinc sulphate
Phenacetin	

Capsules

Methylpentynol capsules, B.N.F.
Tetracycline capsules, B.P.

Draught

Chloral draught, Dental Practitioners' Formulary

Elixirs

Cascara elixir, B.P.
Chloral elixir for infants, B.N.F.
Any elixir containing methylpentynol as sole active ingredient

Emulsions

Chloroform emulsion, B.P.C.
Peppermint emulsion, B.P.C.

Gargles

Ferric chloride gargle, B.P.C.
Phenol gargle, B.P.C.
Potassium chlorate and phenol gargle, B.P.C.

Glycerins

Borax glycerin, B.P.C.
Tannic acid glycerin, B.P.
Compound thymol glycerin, B.P.C.

Inhalations

Menthol and benzoin inhalation, B.P.C.
Menthol and eucalyptus inhalation, B.P.C.

Lozenges

Benzalkonium lozenges, B.P.C.
Benzocaine lozenges. Dental Practitioners' Formulary
Compound benzocaine lozenges, B.P.C.
Formaldehyde lozenges, B.P.C.
Hydrocortisone lozenges, B.N.F.
Potassium chlorate lozenges, B.P.C.

Mixtures

Magnesium hydroxide mixture, B.P.
Magnesium sulphate mixture, B.P.C.

Mouth-washes

Alkaline phenol mouth-wash, B.P.C.
Compound sodium chloride mouth-wash, B.P.C.

Zinc sulphate and zinc chloride mouth-wash, B.P.C.

Paints

Brilliant green and crystal violet paint, B.N.F.

Compound iodine paint, B.P.C.

Poultice

Kaolin poultice, B.P.

Solution-tablets

Mouth-wash solution-tablets, B.P.C.
Sodium chloride solution-tablets, Dental Practitioners' Formulary
Compound thymol solution-tablets, B.P.C.

Solutions

Amaranth solution, B.P.C.

Surgical chlorinated soda solution, B.P.
Formaldehyde solution, B.P.
Hydrogen peroxide solution, B.P.
Weak iodine solution, B.P.

Tablets

Acetomenaphthone tablets, B.P.
Acetylsalicylic acid tablets, B.P.
Compound acetylsalicylic acid tablets, B.P.C.
Soluble acetylsalicylic acid tablets, B.P.
Acetylsalicylic acid and phenacetin tablets, B.P.C.
Acetylsalicylic acid and quinine compound tablets, Drug Tariff
Strong compound aneurnine tablets, B.P.C.
Ascorbic acid tablets, B.P.
Calcium gluconate tablets, B.P.C.
Calcium lactate tablets, B.P.
Calcium sodium lactate tablets, B.P.C.
Calcium with vitamin D tablets, B.P.C.
Cascara tablets, B.P.
Compound cascara tablets, B.P.C.
Compound codeine tablets, B.P.
Codeine phosphate tablets, B.P.
Mercurous chloride tablets, B.P.C.
Paracetamol tablets, B.N.F.
Phenacetin tablets, B.P.C.
Phenacetin and caffeine tablets, B.P.C.
Phenindamine tablets, B.P.

Promethazine hydrochloride tablets, B.P.
Tetracycline tablets, B.P.

Tincture

Pyrethrum tincture, B.P.C. 1934

Waters

Chloroform water
Peppermint water

Barbiturates

Tablets or capsules of any barbiturate which are included in the Dental Practitioners' Formulary for the time being

Penicillin

Injections of procaine benzylpenicillin, whether or not containing benzylpenicillin

Penicillin injection, B.P.

Penicillin lozenges, B.P.C.

Penicillin tablets, B.P.

Phenoxyethylpenicillin capsules, B.N.F.

Phenoxyethylpenicillin tablets, B.N.F.

Sulphonamides

Tablets of any sulphonamide which are included in the Dental Practitioners' Formulary for the time being.

The regulations also provide for the employment of, and the responsibility for, dental hygienists by dental practitioners.

CHEMICALS IN

More "safe use"

THE Ministry of Agriculture, Fisheries and Food has amended the recommendations for the "safe use" of a number of compounds. The number of applications of Demeton-methyl (a mixture of demeton-O-methyl (2-ethylthioethyl dimethyl phosphorothionate) and demeton-S-methyl (S-2-ethylthioethyl dimethyl phosphorothiolate)) allowed on potatoes has been increased to "up to four applications each at 12 fl. oz. per acre."

The recommendations in respect of Diazinon have been extended to include the precaution that "a person who, as a result of using any organo phosphorus compound is under medical advice not to work with such chemicals should not use diazinon." The Ministry have amplified their recommendations concerning the use of diazinon on crops and now state that provided there is a minimum interval of fourteen days between last application and harvesting, the use of the compound on outdoor edible crops should present no hazard to consumers. Regarding indoor crops a minimum of two clear days is recommended between the last application and harvesting of mushrooms, and on cucumbers and tomatoes grown under glass. There is also a special note that "when using diazinon dusting powders on mushrooms care must be taken to avoid overdosing." These recommendations are provisional and are to be reviewed at the end of the 1960 season. The necessity to keep animals and poultry from sprayed areas for at least two weeks, is an additional recommendation as are also the recommendations regarding, avoiding contamination of neighbouring crops, ponds, streams, and the necessity for safe storage away from children and feeding stuffs.

The amendment in respect of phenylmercury salicylate aerosols concerns the safe disposal of used containers

AGRICULTURE

recommendations

which should be "punctured and buried, or otherwise safely disposed of after being washed out thoroughly with soap or detergent and water."

The Allisan dust recommendations have also been amended, the proprietary title in the text has been replaced by the open name 2,6-dichloro-4-nitroaniline. The proprietary product contains 4 per cent. of the compound. The application rates on lettuce grown under glass and intended to be cut before Christmas are: "Pre-planting ½ oz. of a 4 per cent. dust per square yard, applied once only at 2-3 weeks after planting." Recommendations for safe storage, the necessity to avoid contamination of ponds and streams are new recommendations.

For the first time recommendations have been issued for Reglone (9,10-dihydro-8a,10a-diazoniaphenanthrene dibromide) the new non-arsenical chemical that destroys potato haulm. Its use is not considered to present a hazard to operators, provided they observe the following precautions, which distributors are requested to include on their labels:

"If the eyes and skin are contaminated with the concentrate, wash immediately and thoroughly. Wash exposed parts of the body before eating, drinking or smoking and after spraying."

The use of the compound for potato haulm destruction at a rate not in excess of 2 lb. active ingredient per acre should present no hazard to consumers of treated crops. Warnings regarding contamination of crops, ponds and streams, the safe storage of containers away from children, livestock and food, and the safe disposal of used containers are also included in the recommendations which are to be reviewed at the end of the 1960 season.

Allisan dust is issued by Boots, Ltd., and Reglone by Imperial Chemical Industries, Ltd., and Plant Protection, Ltd.

NEW PRODUCTS

Contains Hydrocortisone.—William R. Warner & Co., Ltd., Eastleigh, Hampshire, announce the availability of Amisol-HC ointment. The ointment contains hydrocortisone acetate 0.25 per cent. in the established ointment formula. Amisol-HC is supplied in tubes of 10 gm.

An "Ideal" Denaturant.—A new bitter substance is offered by T. & H. Smith, Ltd., Blandfield Works, Edinburgh. It was discovered in the research laboratories of the company, is the subject of a patent application, and is being issued under the trade mark Bitrex. The makers claim that extended trials which have been undertaken indicate that Bitrex is an "ideal" denaturant.

Thalidomide with Hydrochlorothiazide.—The Distillers Co. (Biochemicals), Ltd., Broadway House, The Broadway, London, S.W.19, announce the introduction of Tensival tablets intended specifically for the relief of both the physical and nervous symptoms associated with the premenstrual tension syndrome. As side-effects from the ingredients are said to be uncommon, the product is claimed to be suitable for monthly routine use. Each tablet contains thalidomide 12.5 mgm. and hydrochlorothiazide 12.5 mgm. Tensival is presented in containers of twenty-five and 100, and the product is classified S.4 B. of the Poisons Rules (prescription only).

Men's Toiletries.—Lorie of Los Angeles, a division of Rexall Drug Co., Ltd., Morley Street, Loughborough, Leicestershire, have introduced a new range of toilet products specially for men under the trade mark Stag. As well as pre- and after-shave lotions the range includes a deodorant stick and after-shave talc.

Sun and Sunless Tans.—Rolls Razor, Ltd., Cricklewood Broadway, London, N.W.2, have acquired from the Drug Research Corporation, New York, U.S.A., sole British rights for Man-Tan (an indoor tanning preparation that is also an after-shave lotion) and Positan (a cream lotion for tanning indoors or outdoors and for protection during sunbathing). Man-Tan contains Protosol brand dihydroxyacetone. Both preparations are now available from wholesalers.

"An Improved Feeder."—Feedrite, Ltd., 300 Kingston Road, Merton Park, Surrey, are introducing an improved baby feeder for the greater retention of heat in baby feeds. Called the Feedrite "Extra" it comprises plastic container (as on the present Feedrite feeder), a new heavy-duty heat-retaining liner, and a wide-necked high density polythene bottle fitted with the Feedrite cap and flanged teat. The Feedrite dome fits over the cap and teat, so ensuring absolute hygiene, and that the teat is never touched by hand.

Automatic Electric Blanket.—Monogram Electric Ltd., Gatwick Road, Crawley, Sussex (a subsidiary of International General Electric Co. of New York, Ltd.), manufacture the Monogram automatic electric blanket. It is

used as an over blanket and is left switched on all night. Except for a sheet all other bed coverings can be discarded. An automatic control permits the user to set the blanket temperature according to individual requirements and that temperature is maintained irrespective of changes in the bedroom temperature. A "safety" circuit incorporated in the wiring of the blanket safeguards the user.

TRADE NOTES

In Tin or Bag.—Potter's glucose fruit pastilles are available from Potter & Clarke, Ltd., River Road, Barking, Essex, in 4-oz. polythene bag or $\frac{1}{2}$ -lb. tin. They are available in five flavours.

Change of Poisons Category.—A. Wander, Ltd., 42 Upper Grosvenor Street, London, W.1, state that their Triominic tablets and syrup are now in Part I and Schedule 7 of the Poisons List and Rules.

"Own-formula" Tablets.—G. O. Woodward & Co., Ltd., Larkhall Works, Morris Road, London, S.W.2, undertake the manufacture of medicinal tablets to customers' own formulas. They guarantee accuracy and quality of result and prompt delivery.

Piperazine Derivatives.—Lake & Cruickshank, Ltd., North Bridge Road announce that they are the United Kingdom agents for Rexolin Chemicals, Helsingborg, Sweden. Their range includes a number of piperazine derivatives.

Day and Night.—John Thompson, Ltd., have opened a warehouse at Central Place, Trinity Avenue, Llandudno equipped to provide pharmacists in North Wales with a quick delivery of a wide range of ethical and proprietary medicines, drugs, sundries and photographic materials. An Isophone night service has been installed to enable orders to be received outside normal working hours.

Correction.—The makers of Shadeine point out that an error

occurred in their advertisement in the *C. & D.*, June 25, p. 100. The retail price should read 4s. 6d. and not as stated. The telephone number of Macarthy's (Wholesale Chemists), Ltd., Pollard Street, Ancoats, Manchester, 4, was wrongly given on the outside back cover of *THE CHEMIST AND DRUGGIST Quarterly Price List*, June 1 issue. The correct number is Ardwick 5131.

Sales Organisation in Britain.—The directors of Parfums Dana, s.a.r.l., Neuilly-sur-Seine, France, announce the formation of a new sales organisation in the United Kingdom. Under the direction of Mr. A. Bryden-Brown the organisation, Dana Sales, Ltd., will be responsible for distribution, promotion and sales. Customers and potential customers are invited to visit the company's showrooms at 6 Paddington Street, London, W.1.

Containers.—The Beatson medical bottle is available in graduated and ungraduated cork mouth and screw-neck varieties from BEATSON, CLARK & CO., LTD., Rotherham, Yorks.—Ranges of bottles in glass and polythene, including dispensing flats, ribbed ovals, bow panels, etc., are available from LAX & SHAW, LTD., 69 South Accommodation Road, Leeds, 10.—Polythene bottles and jars in the Skylon range are available from FIBRENYLE, LTD., 157 Dukes Road, Western Avenue, London, W.3.—Overseals in aluminium, the Alupharm, are offered by IDEAL CAPSULES, LTD., Edinburgh Avenue, Slough, Bucks.

Bonus Offers

CHARLES BEDEMAN, LTD., 180 Queen's Road, London, S.E.15. Lemon cream shampoo. Three free with each three dozen.

REXALL DRUG CO., LTD., Morley Street, Loughborough. Stag men's toiletries. Six free products on standard parcels. 10 per cent. discount on orders of £10 and over.

INFORMATION WANTED

Calidus 6 Way Cushion

PHOTOGRAPHIC NOTES

1960 Catalogue.—R. F. Hunter, Ltd., 51 Grays Inn Road, London, W.C.1, have distributed to photographic dealers on their books their 1960-61 catalogue; copies are available for any other retailers who are interested.

Appointed Agents.—Actina, Ltd., have appointed Bradley & Bliss, Ltd., King's Road, Reading, to be wholesale distributors for their range of photographic products, including Bilora tripods, Stevo screens, Bella cameras, Murray cine viewers, etc. Those items are now available from stock.

Two Screens.—The Aldis Square-40 for average size rooms and the Aldis Square-50 for larger rooms and small halls are screens with a fine beaded surface minimising grain when projecting colour transparencies. The distributors are Neville Brown & Co., Ltd., 77 Newman Street, London, W.1.

Fully Automatic 35-mm. Camera.—The Regula Olympia fully automatic camera, taking 35-mm. film, is marketed by Photopia, Ltd., Newcastle, Staffs.

The lens is an Auto Isconar of 40-mm. focal length, and the lens mount is marked with "zone focusing" figures. Any film speed may be set when the film is loaded.

A New Panchromatic Film.—A new medium-speed black-and-white film, the Ferrania P30, introduced by Ferrania, Milan, Italy, is available (in 120 size only), from Neville Brown & Co., Ltd., 77 Newman Street, London, W.1. It is a fine-grain, thin-emulsion panchromatic film with a speed of 80 ASA (20 DIN).

Slide Mounts and Viewer.—New "Autoslides" for 35-mm. transparencies comprise a push-peg assembly that locks the slide in position. Pre-cleaned glasses are packed separately for each loading. They are available from Johnsons of Hendon, Ltd., Hendon Way, London, N.W.4, who are also marketing a new viewer, the Jumbo 22, for 2 x 2 in. slides. It gives a choice of four picture sizes. Battery-operated, it is finished in maroon and grey plastic.

IN PARLIAMENT

WHEN Parliament assembled after the Whitsun Recess, MR. G. DARLING asked the Minister of Health if he would introduce regulations to require that all new drugs must be tested and evaluated by a responsible body before being offered for sale to the public. In a written reply on June 20 MR. DEREK WALKER-SMITH (Minister of Health) said that, while there were no existing powers under which such regulations could be made, he was giving, and would continue to give, all the help and encouragement he could towards improving present arrangements and facilities for clinical trials. It had been agreed to extend the terms of reference and membership of the Standing Joint Committee on the Classification of Proprietary Preparations to enable that Committee to assist in the matter.

Purchase Tax on Cosmetics

MR. GERALD NABARRO on June 22 made another attempt to obtain purchase tax cuts in cosmetics. He moved an amendment to reduce the 50 per cent. rate to 37½ per cent. The cosmetics industry was a large one, he said. It was doing very well but it laboured under a subtle disability. One could not sell cosmetics and toilet preparations abroad unless they were highly attractively packaged. That was one of the strengths of the French and German export trade. Not only was purchase tax applied at 50 per cent. to cosmetics but to the expensive packages as well. The 50 per cent. rate was applied to the bottles, the aerosols, the cardboard boxes and all the attractive frills and fittings that went into the presentation of those articles. It was highly derogatory to the export trade and it was a disability under which neither the Germans nor the French suffered. MR. A. BARBER (Economic Secretary, Treasury) speaking later, said the yield of the tax from perfumery, cosmetics and some toilet and hair-dressing goods was £22 million. To reduce purchase tax as Mr. Nabarro wished might stimulate home demand far beyond what the industry could already meet without encroaching on the supplies for the export market. Cosmetics was an expanding industry and was not being held back by purchase tax. The amendment was defeated.

European Common Market

Relying to a number of questioners on June 23, MR. HEATHCOAT AMORY (Chancellor of the Exchequer) stated that following discussions between Common Market countries, other members of the O.E.E.C., the United States and Canada, that took place in Paris during June, a study group was formed to examine the way in which reciprocal tariff concessions could be achieved and to seek solutions to immediate trade difficulties in particular products. It was also decided to discuss the long-term aspects of the trade relations between the European Economic Community and the European Free Trade Association. MR. H. HYND asked the President of the Board of Trade how many English firms were opening factories in countries of the European Common Market, and what

effect this would have on United Kingdom exports. MR. R. MAUDLING (President, Board of Trade) stated the Government did not know the figures and it was not possible to say what effect such developments might have on the United Kingdom exports.

Antibiotics in Feeding Stuffs

MR. PRIOR asked the Minister of Health if he would review the regulations governing the inclusion of antibiotics in calf foods. MISS EDITH PITTS (Parliamentary Secretary, Ministry of Health) in a written answer on June 23 stated that a joint committee of the Agricultural and Medical Research Councils was re-examining the possible consequences of the feeding of antibiotics to farm animals and considering whether this constituted a danger to human or animal health. The question of amending the present regulations which did not permit the inclusion of antibiotics in calf food, would also be considered.

DEATHS

COLLINS.—On June 15, Mr. James Albert Collins, M.P.S., 106 Church Lane, Harpurhey, Manchester, 9, aged seventy-three.

GALLOWAY.—Recently Mr. Alexander Shannon Galloway, M.P.S., 41 Beechfield Avenue, Marton, Blackpool. Mr. Galloway qualified in 1895.

HOUGH.—On June 6, Mr. Edgar William Hough, M.P.S., 4 Westfield Road, Witton Park, Northwich, Ches. Mr. Hough qualified in 1925.

RENTSCHLER.—On June 17, Mr. Karl Rentschler, director, Alfred Gauthier G.m.b.H., Calmbach/Enz, Western Germany, aged sixty-two. Mr. Rentschler was closely concerned with the achievements of the German camera shutter industry.

RIMINGTON.—On June 19, Mr. J. M. Rimington, who until April 1 was the managing director of the chemical division of the Distillers Co., Ltd. Mr. Rimington, who was aged 54, was one of the original employees of British Industrial Solvents, Ltd. He was appointed company secretary in 1939, became a member of the board in 1945, and managing director in 1953. Four years later, on the formation of the chemical division of the Distillers Co., Ltd., he was appointed division managing director.

TILLOTT.—On June 12, Mr. John Booty Tillott, F.P.S., 72 Parkway, Welwyn Garden City, Hertfordshire. Mr. Tillott, who qualified in 1900, succeeded his father in the business of J. B. Tillott, Ltd., Marsham Street, Westminster, S.W.1. He semi-retired in 1952, remaining a director and the superintendent chemist of the company.

PERSONALITIES

MR. E. OWEN, M.P.S., has been re-elected chairman of the Bangor City Council's health committee.

MR. A. WRIGHT, M.P.S., D.B.A., has been appointed Assistant Editor of THE CHEMIST AND DRUGGIST. Mr. Wright joined the editorial staff of the paper in June 1958 after many

years' experience in retail and manufacturing pharmacy.

MR. E. J. SHELLARD, B.Pharm., F.P.S., A.R.I.C., F.L.S., a member of the staff of the school of pharmacy, Chelsea College of Science and Technology, has had conferred on him the external degree of Doctor of Philosophy of London University. The title of his thesis was "Pharmacognostical Studies of some Convolvulaceous Drugs." The work was carried out in the pharmacognosy departments of the schools of pharmacy at Bristol and Chelsea. Dr. Shellard served his pharmaceutical apprenticeship with the late Mr. A. R. Wheatley, Gloucester, and, after obtaining his first degree, held appointments with Parke, Davis & Co., Ltd., and Genatosan, Ltd. He obtained a teaching appointment at the Bristol school of pharmacy, Bristol, in 1946, and joined the staff at Chelsea in 1957. He is the author of two books written especially for students of pharmacognosy: "Practical Plant Chemistry for Pharmacy Students" and "Exercises on the Evaluation of Drugs and Surgical Dressings." In the summer of 1959 he spent a month in Poland at the invitation of Professor Deryng, where he was able to make some study of the pharmaceutical profession in that country. Dr. Shellard is a member of the board of examiners in pharmacognosy of the Pharmaceutical Society and an assistant examiner in pharmacognosy for the B.Pharm. degree of the University of London. He is vice-chairman of the Hounslow and District Branch of the Pharmaceutical Society.

BUSINESS CHANGES

ILFORD, LTD., have moved their Dublin headquarters to 33 James' Street.

ANDRE PHILIPPE, LTD., have removed to 71-71B Gowan Avenue, London, S.W.6 (telephone: Renown 2194).

SMITH & NEPHEW-SOUTHALLS, LTD., have moved to 5 Singer Street, London, E.C.2 (telephone (unchanged): Clerkenwell 9022).

NEWMAN LABELLING MACHINES, LTD., is the new title adopted by D. Trapow & Co., Ltd., Queens Road, Barnet, Herts.

MR. F. A. LYNE, B.Sc., F.R.I.C., who is secretary of the Association of Public Analysts, has joined the consulting practice of J. A. Radley, M.Sc., F.R.I.C., F.S.D.C., 220 Elgar Road, Reading, as head of the analytical section. He is retaining his appointments as public analyst and official agricultural analyst.

Appointments

DISTILLERS CO. (BIOCHEMICALS), LTD., have appointed new representatives as follows:—Messrs. E. P. Ashmole (for South-west England); L. A. Bainger (West End of London); N. S. Crewe, M.P.S. (Liverpool); W. G. Davies (Worcestershire and parts of Birmingham); W. C. McGovern, B.Sc.(Pharm.), M.P.S. (South-west Scotland); A. Power (North and North-west London); A. Rogers (South Wales); and J. E. Taylor (East Lancashire).

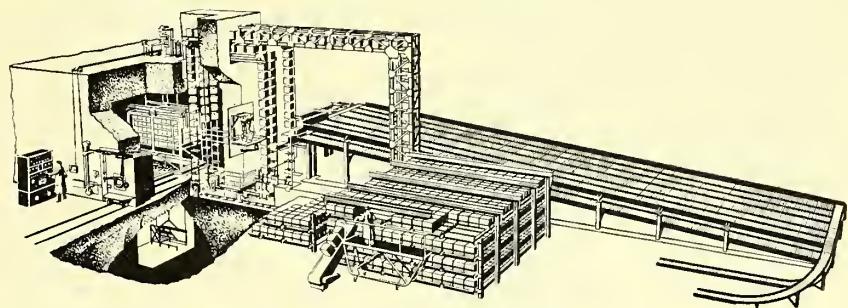

RADIOISOTOPE DEVELOPMENTS

New laboratories and industrial techniques

TWO new laboratories were opened recently by Sir Cyril Hinshelwood (president of the Royal Society) at the Radiochemical Centre (United Kingdom Atomic Energy Authority), Amersham, Bucks. The first is mainly given over to the organic synthesis of compounds labelled with carbon-14 and tritium for use in chemical and biological work. The relatively low toxicity of those isotopes, and their freedom from the emission of gamma (penetrating) radiation, permits the use of a building of conventional design. The new alpha laboratory, on the other hand, is concerned with radium and naturally-occurring radioelements. Those compounds are toxic, and usually emit gamma radiation. The equipment is therefore complex, and the work is centred upon "hot benches" where 3 or 4 ft. of concrete and up to 10 in. of lead provide screens for the staff. The benches are 50 ft. long and composed of reaction boxes interconnected by a remote-control electrical railway for the transfer of active materials. Mechanical manipulators are used, and the work is viewed through 18-in. thick lead glass windows.

Labelled Pharmaceutical Chemicals

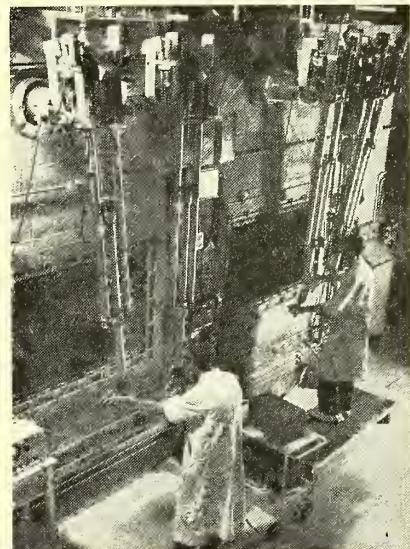

Many labelled pharmaceutical and biological chemicals are available, including progesterone; cortisone; cholesterol; testosterone; choline; serine; methionine; and valine. In all over 900 radioactive chemicals and radioactive sources are available from the Centre. The radioisotopes are used in diagnosis, in therapy, and in fundamental and applied medical research. The commonest diagnostic use is for testing the function of the thyroid gland with iodine-131 or iodine-132. Vitamin B₁₂ labelled with cobalt-58 is much used in cases of pernicious anaemia. Other isotopes are used to measure the fluids of the body, their composition and their cir-

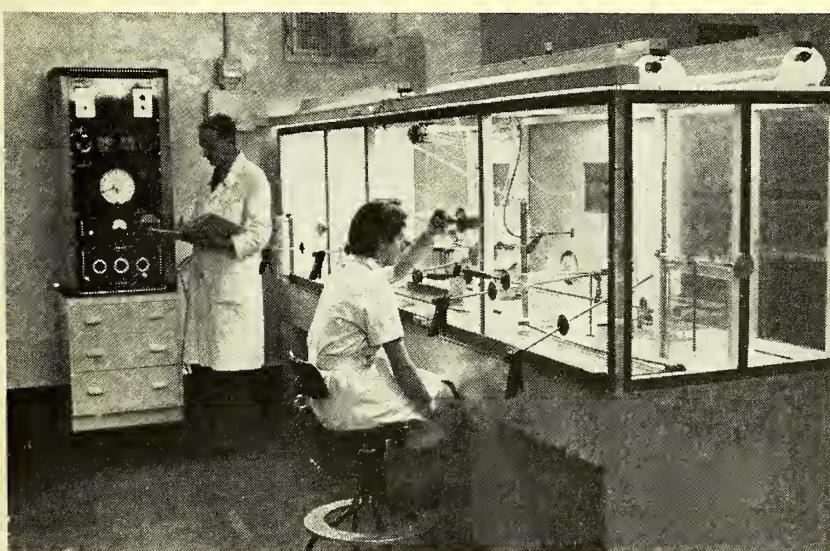

A diagrammatic representation of the experimental radiation sterilising plant. The cobalt-60 radiation source is placed in a rack at the foot of an 18-ft.-deep pool of water. Boxes are fed into the heavily shielded chamber and the source is hoisted out of the pool into a position past which the boxes travel. Apart from being loaded and unloaded the unit functions automatically. After use the source is stored once more at the bottom of the pool.

culation; the plasma, with human serum albumin-I-131; total body water, with tritium; the electrolytes, with sodium-24 and potassium-42; the volume and time of survival of red blood cells, by labelling them with chromium-51. In the treatment of malignant disease, isotopes such as cobalt-60 and caesium-137 are used externally as teletherapy units, or "interstitially" by direct insertion into the diseased tissues in the form of needles and other appliances. Beta emitters such as strontium-90 are used for treating surface lesions. Those methods are extensions of earlier procedures developed with radium, but isotopes offer the additional possibility of treatment by selective localisation. Thus iodine-131 is used in the treatment of the thyroid gland because it is selectively absorbed into that tissue; phosphorus-32 is used in the treatment of certain blood diseases by selective absorption into the bone marrow; and colloidal isotopes may be injected into certain body cavities. About 100,000 patients are treated annually by radiotherapy in the United Kingdom.

Arrangements at present are based

Heavily shielded "hot" boxes in which the manipulation of apparatus and chemicals depends upon the skilful use of mechanical "hands."

Dispensing radioisotopes at Amersham. Plastic screening and mechanical manipulation is sufficient to protect the staff.

upon the dispensing of medicaments at Amersham according to requirements specified by hospital doctors. Injection solutions are sterilised by autoclaving, and sterility tests are carried out by orthodox procedures. The packaging of isotopes for delivery is thoroughly organised to ensure safety and compliance with activity limits specified for postal, air, and train transport. The provision of a cobalt-60 source for an Australian wool sterilisation unit against anthrax, one of the demands made upon the Centre, required exceptional apparatus. The final container with isotope weighed 8 tons, and the external surface of the steel had a steady temperature of 17°C. above that of its surroundings. All dispatches from the Centre are checked by a radiation counter before release.

Radioisotopes for Industry

A member of the C. & D's editorial staff, who visited the Centre recently, accepted a further invitation to visit the Authority's newly-established research laboratories at Wantage, Berks,

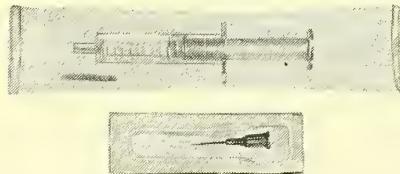

Hospital apparatus used in the treatment and diagnosis of thyroid gland conditions.

gaining there an insight into the wide potential uses of radioisotopes in industry.

The technological irradiation group, isotope research division, operates three types of gamma source, which are available for research and pilot irradiation work. The first are known as cobalt cells. Twenty-three cells at Wantage each contain from 100 to 10,000 curies of cobalt-60, ranging from "point" sources to clusters of 3-ft. articulated rods. Much of that capacity is normally engaged on internal research, but materials from other establishments, and from industrial clients, are also accommodated. Dose rates in small samples may reach 200,000 rads per hour, and dimensions are limited chiefly by requirements of dose uniformity.

The package irradiation plant is of particular interest to pharmacists. A demonstration unit has been built at Wantage for the automatic handling of standard packages (14 x 12 x 9 in.) through an irradiation process providing doses in the range 10,000 rads to 5 megarads. The capacity of the plant illustrated diagrammatically on p. 7.

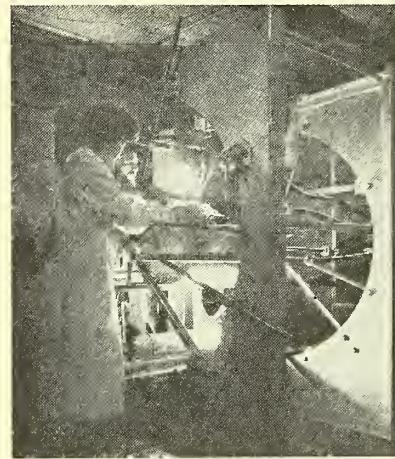

Disposable plastic syringes are sealed in a transparent plastic container for sterilisation. The dark shading on the bag is a colour marker to indicate to the user if radiation has been carried out. The hypodermic needle illustrated has a plastic mount and is strip-packed.

is about 100 cu. ft. per day at a sterilising dose of 2.5 megarads and larger quantities at lower total doses. It consists of an irradiation chamber shielded by concrete; a cobalt-60 radiation source; a water pond in the irradiation chamber for source loading and storage; an automatic handling system for the packages; control and safety system; and ancillary services. The

internal dimensions of the irradiation chamber are 20 x 20 x 14 ft., and the shielding walls and roof are normal concrete 5 ft. 6 in. thick. A stepped plug door moves on rails. Packages are conveyed through a labyrinth in the roof. The radiation source of 150,000 curies of cobalt-60 is contained in a rectangular frame approximately 7 x 2 ft. When in use, the source is at the centre of the conveyor system full of packages. If access to the chamber is required, the source is safely stored in the 18-ft.-deep pond, giving a safety margin of 6 ft. for handling during loading of the source. The pond is lined with stainless steel, and the demineralised water is continuously circulated through a purification system. The entire system is duplicated, so that two sets of packages may be handled simultaneously to receive different doses.

The cost of treating 1 cu. ft. of material with a dose of 2.5 megarads is in the region of 15s. In a plant designed for a specific purpose considerable economies could be achieved, and a reduction of that cost should be pos-

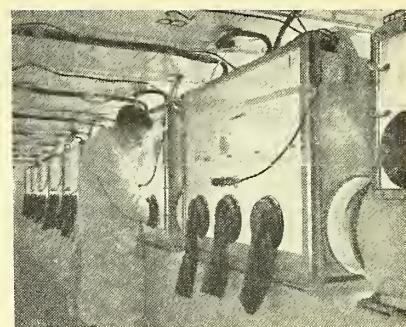

Setting-up a radiation cell at Wantage. Elaborate precautions are built in and the staff prepare materials for radiation as shown. The radiation source is stored in the thick concrete walls of the cell and fed into the room by servo-mechanisms.

sible. It is based upon a throughput of 3 tons of medical products in twenty-four hours. The Authority emphasises that development of its package sterilisation facilities is intended to aid industry. The Authority's experience covers many routine hospital equipments such as catheters; surgical gloves; arterial substitutes; dressings; surgical sutures; surgical blades; disposable plastic hypodermic syringes; and disposable hypodermic needles mounted in plastic.

Food is also being irradiated at Wantage to determine the effect of the process upon nutritional values, and the influence upon keeping properties. Other work includes the eradication of insect pests from stored grain. Demonstrations to the visiting party covered many other new applications of radioisotopes.

Isotopes may now be used in agricultural research by means of the tracer technique to discover the extent to

Fibre-glass and plastic "hot" boxes arranged in series with an interconnecting electric railway. In the event of severe contamination a box may be removed and quickly replaced with little interruption to work.

which fertilisers are utilised by the plant; to evaluate soil constituents and determine growth rates. By means of radiation, too, the natural genetic mutation rate may be accelerated with the intention of eventually improving crops.

Many new industrial applications have also been worked out, some of them adapted to specific manufacturing functions. For example, cardboard tablet containers are being monitored to ensure that every pack is filled and that faulty containers are rejected; tooth-paste tubes are checked to ensure that they are correctly filled.

Thickness measurements are also possible by providing a source convenient to the test material, the attenuation of radiation passing through giving accurate data.

Electrostatic charges on synthetic fibres during processing attracts dust, but the charge may be removed with a beta-radiation source that ionises the surrounding air exposed during "shutdown," thereby keeping the material clean.

Simple pipe-line leakages are readily detected by adding a suitable radiation source and measuring the resulting radiation at the escape point: the method is exceptionally useful for systems buried in the soil.

Hermetically sealed apparatus may likewise be tested by immersion in a radioactive gas. After pressure has been applied the equipment is tested for activity.

ISOTOPE BUREAU

To assist industry

THE United Kingdom Atomic Energy Authority, at its premises at 11 Charles II Street, London, S.W.1, has opened an isotope information bureau to assist industry in applying and using radioisotopes. The bureau is expected to be of special interest to managers, plant designers and production staff of industries that hitherto had little or no association with atomic energy but which might effectively secure considerable savings in manufacturing costs by applying radioisotopes to factory processes.

An exhibition explains and demonstrates the wide uses to which radioisotopes have already been put in industry. Technical staff attend the bureau to assist inquirers.

HOW I MODERNISED MY PHARMACY

What followed when I decided to buy the shop next door

CLIFFORD ORRELL

IN November 1958 I was offered premises adjoining my pharmacy at 61 Plungington Road, Preston, Lancs. My pharmacy had been established since 1861, and the questions that faced me were whether there would be enough scope in the area to warrant expansion, and whether the expense of converting the two premises into one, plus the cost of completely refitting, would be justified by an increase of business? Other factors that had to be taken into consideration were the additional costs of lighting and heating, an increased rating assessment; and a possible increase in staff.

Over the previous ten years business had been steadily increasing, and inquiries at the local planning offices reassured me that any clearance order pending did not, at any rate, cover the entire district in which my business was

The original pharmacy, with the shop next door that was taken over. At top of page: A half-way stage in the transformation.

situated. Observations upon other businesses in the area showed me that non-pharmacist traders were showing an increased interest in pharmaceutical goods, and that, even if the present trade they were doing in such goods would remain with them, at least the drift might be halted. A further problem that had to be considered was that the premises at number 61 were originally taken on a twenty-one-year lease, making it necessary for me to acquire them before committing myself to purchasing the adjoining property. Having, however, taken all those factors into consideration, I completed, in January 1959, the purchase of both properties.

Type of Pharmacy Sought

Those problems, though solved, led to other problems, the principal of which was the type of pharmacy I intended to have. From local knowledge I believed that the greatest increase in trade at the site would be from counter sales. The siting of doctors' surgeries and other pharmacies in the area gave little encouragement to thoughts of increases in dispensing. For some time I had been studying American trade journals, and they gave statistical proof that open display of goods over a maximum area was the key to increased business. The opening of many new and expensive self-service stores in this country also proved the correctness of the American conclusion.

So I decided to have backless windows, making the whole shop a display area. That decision was influenced by

the long frontage but small depth of the proposed new premises. Between January and May 1959 I considered and revised plans, specifications and prices. If the shop area was to have the display value intended, a means of preventing condensation on, and frosting of, windows became most essential. Double glazing was suggested to me as the most certain method of ensuring that those problems would not arise, and I agreed to have that done. The plan of the proposed new front had, of course, to be submitted to the town planning officer for approval, and that was duly secured.

The shopfitters (Myers of Old Street) were given my ideas for the proposed new layout, and they drew up plans which, after discussion and some minor alterations, were finally

The new shopfront embraces both sets of premises but incorporates only one entrance in a new position.

approved. Plans showing the necessary structural alterations were sent to a building contractor, who thoroughly surveyed the premises, a procedure their age made most necessary. Despite those thorough precautions, snags arose that had not been foreseen. That is one of the drawbacks of old property. Many extras to the original specifications had consequently to be agreed for the present and future security of the premises.

Heating Method

Heating arrangements were placed in the hands of electrical contractors, oil heating having been discarded owing to storage difficulties and because no great enthusiasm had been shown or practical scheme offered by the local gas authority. The electrical contractors recommended night storage heaters as the most reasonable in initial cost and the cheapest to run. The factors taken into consideration by the contractors in deciding on the number of heaters to be installed were the area of the premises, the number of times the shop door was likely to be opened daily, and the areas of the glass windows and outside walls. On those considerations they recommended four heaters all having thermostat controls. Again specialists were consulted on the lighting of the pharmacy. The decision was that fluorescent lighting would be the most reasonable in cost and colour-matching tubes were used so as to give correct shades to lipsticks, etc., in which there was a considerable turnover.

A considerable amount of internal structural work was

necessary. Three interior walls had to be demolished and steel girders erected to support the upstairs walls. Steel girder and stanchions were also required to support the increased frontage wall above the windows. For that work plans and specifications had to be submitted to, and approved by, the town building officer, who did finally approve them.

Constructional Work

May 1959 saw the arrival of the building contractors, who proceeded to prop up the entire front of the building, commencing from solid foundation under the cellar floor and advancing floor by floor to roof level. Conditions were then considered safe for the whole front to be demolished, and for existing interior walls to be demolished. By the end of July the whole of that work had been done, the floors of the two premises had been levelled and the interiors plastered. Electricians had worked in conjunction with the builders to lay cables before the walls were finally plastered. After that work had been completed the shopfitters moved in, and they completed the new frontage and interior fittings by the middle of August. Decorators papered and painted the ceiling and frieze and linoleum of a prearranged pattern was laid on the floor. It had been suggested to me—and I agreed—that the design of the floor covering could encourage or deter custom. The pattern chosen was

The elevational sketch prepared by the shopfitters (Myers of Old Street, London, E.C.1), for the self-selection unit.

red arrows in a grey background, the idea being that the arrows, pointing inwards and towards the self-selection fittings situated along the entire length of the back of the shop, would act as an "invitation" to customers.

The self-selection unit installed in the pharmacy is 6 ft. 6 in. high (the normal height of such fittings). Shelves at counter level are shallow, increasing in depth as they go higher or lower. That arrangement brings into prominence, and makes goods more visible and conspicuous above or below counter level. The unit has fluorescent tubes along its entire length for illumination of goods and to show up name plates placed above each of the seven sections. The name plates are in white opaque plastic with red lettering to indicate the type of goods in each section. They are of standard size and may be interchanged if necessary, spare plates being available for seasonal business changes. The edges of all the shelves on the unit are fitted with brackets for price tickets, so that all goods for self-selection are priced.

Storage Plus Display

Units on the side walls of the pharmacy are of conventional design, with glass sliding doors, one side being devoted to cosmetics, the trays and shelves being of suitable size for those goods. A small counter display case in front of the unit is designed to hold and display shade cards and cosmetic testers. Cases on the opposite wall are used to hold photographic apparatus and accessories and are fronted by

a normal counter with open display trays. In continuance of the end of that counter is a door with a hatch to the dispensary, so that prescriptions may be handed in and medicines handed out.

Six months after completion of the work, it is possible to report that no snags have developed. Customers appear to appreciate, as do the staff, the warm, light and spacious shop. The shop is illuminated until 11 p.m. each evening, but my electricity account for the winter quarter was not nearly so heavy as I had expected.

The business remained open as usual during the entire reconstruction, and the turnover kept up to seasonal average.

NEW BOOKS

British National Formulary, 1960, alternative edition

Pharmaceutical Press, 17 Bloomsbury Square, London, W.C.1 (jointly with the *British Medical Association*). 6½ x 4 in. Pp. 292. 8s. (postage ninepence). Interleaved, 12s. 6d. (postage 1s.).

THE alternative edition of the *British National Formulary*, first published in 1957, was an innovation that has proved successful. The new edition (1960) follows closely the style of its predecessor, and the preparations in the formulary are again arranged according to their pharmacological classification under English main titles. The pharmacological classification itself has been simplified, and page references have been included for the groups of preparations that are listed individually in the appropriate sections of the formulary. That improvement should further facilitate the use of the book by the prescriber in search of alternative preparations available for treatment. There has been some rearrangement of the material in order to obtain a more rational pharmacological classification of the preparations included. The local anaesthetics and counter irritants have been transferred to the group of preparations affecting the nervous system. New sections have been added dealing with motion sickness, anticholinesterases, neuromuscular blocking agents and antimitotics. Preparations affecting allergic reactions have been brought together in a new group. The section on diagnostic agents has been deleted, and the preparations transferred to the appropriate groups in the main body of the pharmacological classification. Perhaps the most noteworthy feature of the alternative edition is the notes for prescribers attached to each section of the book. Those have been revised and enlarged where necessary. They form a useful guide to the preparations of the B.N.F., and contain much information of interest to the pharmacist as well as to the prescriber. Of particular value is the section dealing with water and electrolyte replacement, which describes the range of preparations and their uses in addition to the data on milliequivalent concentrations also included as an appendix in the standard edition. A review of the standard edition (see *C. & D.*, April 2, p. 373) outlined the new preparations added to the Formulary but it is pertinent to comment further on the extension of the range of preparations covered. There is now a more extensive coverage of preparations commonly used in hospitals, and that should considerably increase the usefulness of the Formulary to the hospital pharmacist. In particular, mention should be made of the neuromuscular blocking agents and the antimitotic drugs, which have been included for the first time. In order to limit the scope of the book in accordance with its original function, the compilers have had to omit such exclusively hospital preparations as diagnostic x-ray media and other agents used in diagnosis, and vaccines and sera are not included in the B.N.F. at present. The children's preparations have been brought together and are included in a separate infants' section on distinctively coloured pages, as in the standard edition. That innovation has been introduced as the result of the experience of many prescribers in using the first edition. The preparations in the infants' section are listed under Latin titles, and the arrangement is alphabetical. The alternative edition of the Formulary is conceived primarily from a medical standpoint and will naturally, therefore, be of most use to prescribers and medical students. However, there is much of interest in it to the pharmacist, particularly if he wishes to keep abreast of modern developments in therapeutics. Pharmacy students will also find the prescribers' notes of value in translating pharmacological training into terms of practical therapeutics.

Agricultural Chemicals

A NEW scheme to enable users to select, and advisers to recommend, efficient and appropriate agricultural chemicals and to discourage the use of unsatisfactory products, has been agreed between the Minister of Agriculture and Fisheries and the manufacturers. The essence of the scheme is the granting of official approval to proprietary brands of agricultural chemicals. The chemicals included in the scheme are those used for the control of plant pests and diseases, for the destruction of weeds, for growth regulation and for other crop-protection purposes. Products that are available in retail packs for use by amateur gardeners are also included, but products used as rodenticides and for purposes other than crop protection (for example, for protection of stored products; for veterinary or domestic uses) are not. The scheme is intended to provide only for the approval of claims for biological uses and is not concerned with claims for the safe use of a product. Nevertheless, products are not to be accepted into the Agricultural Chemicals Approval Scheme until their safety in use has been considered by appropriate Government departments and precautions have, if necessary, been recommended.

Participation in the scheme is voluntary, and approval is granted only for the conditions of the United Kingdom. The Agricultural Chemicals Approval Organisation (A.C.A.O.) is empowered by the Ministers of the agricultural departments to approve on their behalf, agricultural chemicals for which there is adequate evidence of efficiency. A certificate of approval is granted to each approved product, and the container of such products then carries an identification mark known as "the approval mark." Products are dealt with in a number of categories. Category I comprises those containing active ingredients not hitherto approved for crop protection in the United Kingdom and changes in formulation of products already approved. The manufacturer is required to supply, from field trials, biological evidence of efficiency. Where the A.C.A.O. desires independent biological evidence to supplement what is provided by applicants, the Organisation is free to make arrangements for such trials. Category II includes products guaranteed by the applicant to be identical with a product already approved. Category III comprises products guaranteed by the applicant to conform to an official specification. For products coming within categories II and III neither the biological evidence nor independent trials are required. Category IV includes products that have been approved but are re-

submitted for the approved information to be changed. Such a change may take the form of an addition to the list of pests, diseases or weeds controlled, or an alteration in "dosage" rates. For those changes biological evidence is necessary. The applicant must in some circumstances provide evidence of satisfactory stability of the product during storage. All products to receive approval must be re-registered annually and a list of such products is being published in February of each year.

Once approval has been given, the applicant may not alter the approved part of the label without the permission of the A.C.A.O.

It will be possible for manufacturers to secure approval for new products before putting them on the market. A fee of £30 is payable at first application for approval for each product, and £5 is to be charged for each application to amend approved information; the annual re-registration fee is £6.

The new scheme supersedes the Crop Protection Products Approval Scheme, which has been in existence for twenty years, and the claims for products approved under the old scheme are being re-examined before they are re-registered under the new one.

Mr. John Hare (Minister of Agriculture), in referring to the scheme recently, claimed that the scheme should have the effect not only of discouraging the use of unsatisfactory or inefficient chemicals, but of helping, through the display of the new approval mark, the sale of the products. With that view we agree. The effect of the scheme will be carefully noted, not only in the sphere of agricultural chemicals, but also possibly in the fields of human and veterinary medicine, where the basic problems are not entirely dissimilar.

Overseas Trade in May

THE high rate of exports achieved by the United Kingdom pharmaceutical industry during the opening months of the year was maintained during May. Although lower than in April when the shipments were valued at over £4 millions for the first time, May's exports of drugs, medicines and medicinal preparations at £3.9 millions was the second highest for any month and compares with the monthly average of £3.7 millions for the first quarter of 1960 and £3.4 millions for the first quarter of 1959. Most of the items for which separate statistics are provided by the Board of Trade (see table) were slightly above routine levels but antipaludics at £193,018 had never achieved that peak before.

Australia maintained its position as the leading market for United Kingdom prepared medicines; Nigeria was second at £238,648 but only narrowly so as shipments to Canada jumped to £237,844 against £98,218 in May 1959. The recently improved sales to Pakistan were also maintained, the value in May being £202,134 bringing the total for the year so far to £1.1 million. Exports to the Irish Republic were valued at £171,829 and to the United States at £155,644.

On the import side although most of the items for which figures are divulged were at a lower rate than usual the total at £407,779 was about average because of an increase in value of the unclassified items.

Total exports from the United Kingdom during May were valued at £317.5 millions with imports at £389.7 millions and re-exports at £11.8 millions. Although the recorded value of exports in May was higher than in

any earlier month, after adjustment to eliminate normal seasonal variations exports showed no increase on the March-April level, and in the three months March to May were 1 per cent. less in value than in the previous three months. The rise in exports at the beginning of the year has not been maintained in recent months. The substantial increase during last year and up to the first month or two of 1960, however, left the average level for the first five months of 1960 still 9 per cent. above the average for the twelve months of 1959.

The slowing down in the rate of increase in imports which was suggested by previous figures received some confirmation from the most recent figures, nevertheless, the Government has been worried by the fact that this high rate of imports has not been matched by exports.

Lord Rootes (chairman of the Dollar Export Council), who has just returned from the New York exhibition (see p. 1), rightly drew attention to that state of affairs with particular reference to the dollar markets. He pointed out that while United Kingdom total exports to the United States during May were 7.4 per cent. higher than in the corresponding month of 1959 trade in the opposite direction was 95.6 per cent. higher. The similar figures in the case of Canada were: U.K. May exports up 14.4 per cent. on last year; Canadian exports to this country up 40 per cent.

EXPORTS						VALUE
Drugs, medicines, medicinal preparations (total)	3,947,334
Vitamins	247,289

Onward from Galen

A CURRENT CAUSERIE

A NEW mobile information unit for use in cancer education of the public, believed the first of its kind in Europe, went into service at the end of June as the latest extension to the work of the Manchester Committee on Cancer. The Committee, an independent voluntary body supported by local authorities in Lancashire and Cheshire, has for some years been engaged in a programme of public education designed to change the prevailing climate of fear that surrounds the disease and to stress the value of early treatment. Doctors on its panel of speakers have given 1,800 lectures to local organisations, but there has for some time been an obvious need for some means of bringing reliable information to those people who belong to no club or association. A nurse/lecturer is in charge, and she co-operates with business and industrial groups in arranging talks or film-shows to people at their places of work. She also takes the unit to agricultural shows and other public exhibitions. The vehicle is equipped with cine-projector, collapsible screen, films and other visual aids, and literature. The most encouraging feature of the new project is that it is a token of the public's enthusiasm for the Committee's work. The vehicle and all its equipment were the gift of Rotary International, District No. 105, whose constituent clubs include many pharmacists among their members.

NATIONALLY speaking "blowing one's own trumpet" is a practice rarely adopted by the British or so it has often been said by Government spokesmen, trade mission delegates back from the United States, foreign buyers, and the like. In the narrower field of companies and their shareholders, similar criticism may have excusably been levelled by the shareholders whose only communication from the company each year was an audited form of accounts. Of late, however, there has been a growing tendency for companies to issue brochures describing and illustrating their activities and their products. Two admirable examples of these were received by the same post recently—*Building for the Future* by Boots Pure Drug Co., Ltd., and *The Raw Materials of Progress* by Laporte Industries, Ltd. From a compiler's angle, the first, with a wealth of photogenic material to draw upon in the form of new retail branches, finished products and consumer goods familiar to all passing up and down the local high street, must have had a relatively easy task. Not so the producers of the second, for they were concerned with goods which the public never sees—liquids and powders packed in sacks, bottles and carboys, etc., which to a layman, as the book says, look very much like one another. Yet few industries could get on without them. Introducing the book at a private meeting in London on June 21, Mr. P. D. O'Brien (chairman of the company) said that they had undertaken that form of communication because he believed that it was most important for everyone concerned in industry, whether as an employee, as a shareholder, or a user of the end-product, to know what the other fellow was doing, and how he went about it. That was particularly important for the British chemical industry, which worked so hard, and invested so much money, in order to produce things that were essential to modern civilisation, but which were rarely seen by the public. May we suggest that certain parliamentarians should be presented with a copy? We are confident they would read it and make use of the information therein.

"I STAY WHITE": To the enterprising chemist who has sent me a bottle of a new kind of face lotion, may I say this? I do not wish to appear in public wearing "a healthy synthetic sun tan." If I did, I would prefer to use walnut juice rather than some revolting new chemical. It is my intention to use the liquid in seeing if it will tone down the colour of a piece of bare wood in the garden. . . . There must be a sensible use for the stuff.—Gilbert Harding in the *People*.

PHARMACY IN MALTA

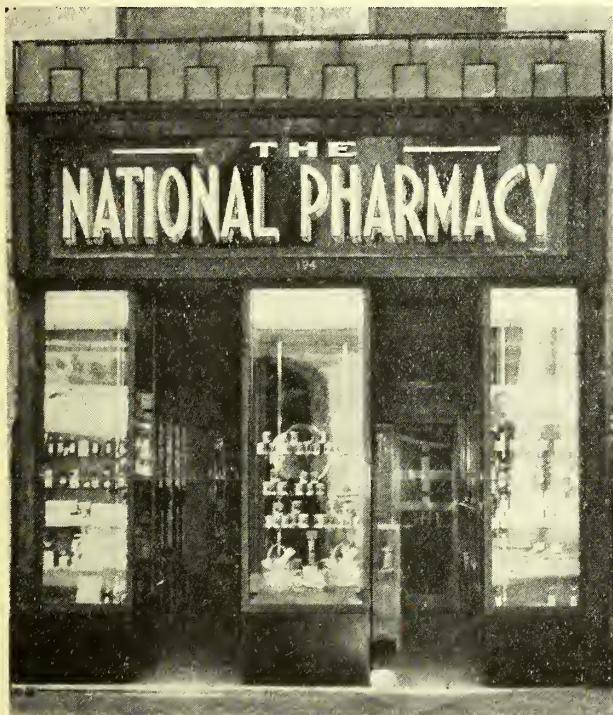

A four-year course: no lack of employment: growing competition

UNTIL about fifteen years ago the Pharmaceutical Chemist diploma (Ph.C.) in Malta, granted on completion of a three-year course, was the sole method of entry to a pharmaceutical career. Subsequently a degree in pharmacy (B.Pharm.) was introduced, and an extra year, intended to raise the general educational standard of the pharmacist, was added to the course. The course is now divided as follows:—

FIRST YEAR (up to Higher certificate standard): English language and literature; Maltese literature and philology; biology; chemistry; physics; and higher mathematics.

SECOND YEAR: Biology, chemistry and physics; pharmaceutical chemistry.

THIRD AND FINAL YEAR: Pharmaceutics, pharmacognosy and pharmacology. A practical course in the University's laboratories accompanies each scientific subject of the course.

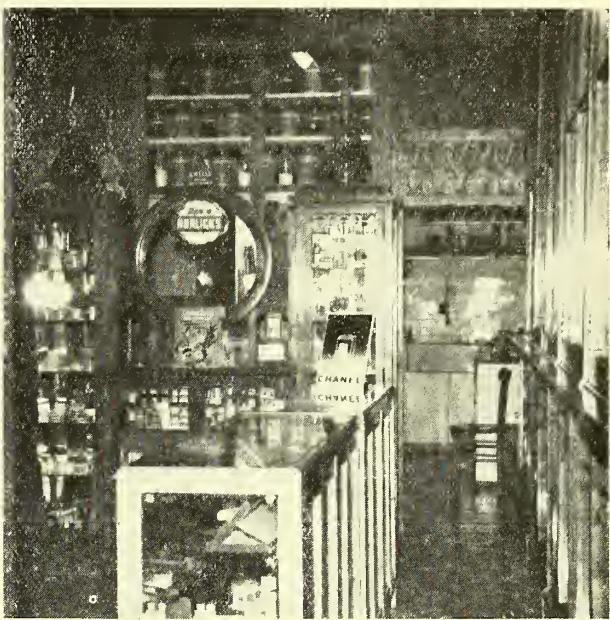

Before beginning the two-year final course the student has to furnish the name of a dispensary where he is to carry out his practical training, on the completion of which and prior to the final examinations a certificate, duly signed by the managing apothecary under whose guidance the practice will have been carried out, has to be produced.

When a student has satisfied all the conditions he applies to the Medical and Health Department for a warrant to practise, and has his name inscribed in the Pharmaceutical Register. After that he is allowed to practise as an apothecary.

The young pharmacist in Malta finds little difficulty in getting employment. Some pharmacists (though few), embark on a career in a local civilian or Service hospital. A few others may be lucky in becoming medical representatives for a major foreign manufacturer operating in the islands. Most, however, go into privately owned pharmacies.

In the dispensary the pharmacist may be called upon to perform the varying duties of a retail pharmacy, from responsibility for the key of the Dangerous Drugs cupboard to all-round managerial responsibility and from selling cosmetics to giving injections.

The National Pharmacy,
Hamrun, Malta.
At left: The Shopfront.
Above: Counter and fit-
tings of the Shop.
Below: A corner of the
dispensary.

In most Maltese pharmacies it is the practice to maintain a clinic attended by one or more practitioners, who pay no rent. The whole thing operates as a kind of "symbiosis." The doctor, in attracting patients, provides the chemist with his customers. The chemist's customers are likely patients for the doctor.

Between the physician and the pharmacist there often exists an even closer relationship. Often the two occupy their less busy hours by discussing the merits or demerits of the various drugs used, special dosages, side-effects, or perhaps the results obtained by the combined use, for the first time, of two or more drugs.

The stock carried in the average Maltese pharmacy has, for the most part, remained traditional, but modern trends are gradually finding favour.

Under the impact of competition some dispensaries, even of the more professional type, have to add to their stock in trade articles alien to pharmacy, such as plastic articles, jewellery, beach-toys, sun-glasses, photographic goods and projectors, vacuum flasks, etc. Many, however, manage to preserve some of their dignity by relegating those intruders to a corner of the premises.

GUIDE TO NEW MEDICAMENTS

Information about proprietary products supplied principally on prescription. Reprints on perforated gummed paper for affixing to index cards are obtainable from the Editor. Notes on the products are given on p. 18.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

ANTHICAL cream

MANUFACTURER: May & Baker, Ltd., Dagenham, Essex.

DISTRIBUTOR: Pharmaceutical Specialities (May & Baker), Ltd., Dagenham, Essex.

DESCRIPTION: A flesh-pink cream containing 1.5 per cent. w/w of mepyramine maleate, and 15 per cent. w/w of zinc oxide in a vanishing-cream type base.

INDICATIONS: Relief of sunburn, itching, nettle stings and prickly heat.

METHOD OF USE: To be rubbed gently into the affected parts. May be applied three times daily.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

SOVENTOL

MANUFACTURER: Knoll, Ltd., 20 Gerrard Street, London, W.1.

DISTRIBUTOR: Pharmethicals (London), Ltd., 20 Gerrard Street, London, W.1.

DESCRIPTION: Tablets each containing 50 mgm. of Soventol hydrochloride (N-phenyl-N-benzyl-4-amino-1-methyl-piperidine hydrochloride); jelly containing 2 per cent. of Soventol lactate.

INDICATIONS: For the treatment of pruritus and all allergic and hypersensitivity reactions.

DOSAGE: Adults: 1 tablet (50 mgm.) repeated if necessary in 6-8 hours. Children: 25 mgm. two to four times daily if necessary. Infants: 10 mgm. two or three times daily if necessary.

The jelly may be applied in a thin layer as required.

HOW SUPPLIED: Tablets in tube of twenty and bottle of 200 and jelly in tube of 20 gm.

FIRST ISSUED: April 1960.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

AKINETON

MANUFACTURER: Knoll, Ltd., 20 Gerrard Street, London, W.1.

DISTRIBUTORS: Pharmethicals (London), Ltd., 20 Gerrard Street, London, W.1.

DESCRIPTION: Tablets each containing 2 mgm. of the hydrochloride and ampoules each containing in 1 mil of isotonic solution 5 mgm. of the lactate of 3-piperidine-1-phenyl-1-bicycloheptenyl-propanol-(1).

INDICATIONS: All forms of Parkinson's disease and syndrome, such as idiopathic; postencephalitic; in arteriosclerosis; intoxications; and Wilson's disease.

DOSAGE: According to individual requirements.

HOW SUPPLIED: In tube of twenty and bottles of fifty and 200 tablets and boxes of six and thirty ampoules.

FIRST ISSUED: March, 1960.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

FALAPEN

MANUFACTURER: Duncan, Flockhart & Co., Ltd., 16 Wheatfield Road, Edinburgh 11.

DESCRIPTION: Yellow-coated tablets consisting of a shell and core, each tablet containing 500,000 international units of penicillin G (benzylpenicillin). The shell contains crystalline potassium penicillin G which dissolves quickly on entering the stomach. The core is enclosed in a special coating which is insoluble in the stomach but is immediately soluble on entering the gut to give a slow steady release of penicillin.

INDICATIONS: Acute infections caused by penicillin-sensitive organisms and the prophylactic administration of penicillin.

DOSAGE: One tablet every 12 hours, preferably before a meal. Administration should continue for at least 48 hours after clinical cure is apparent.

HOW SUPPLIED: In box of 100 foil packed tablets.

FIRST ISSUED: May 1960.

SUPPLY RESTRICTIONS: Therapeutic Substances Act.

NOTES: Not to be administered to patients with a history of allergy to penicillin.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

GEWODIN

MANUFACTURER: Geistlich Sons, Ltd., Chester.

DESCRIPTION: Tablets each containing: 3-(N-methyl-(α -methyl-B-phenyl) - ethyl - aminomethyl) - 4 - isopropylnorphenazone, 0.025 gm.; paracetamol, 0.25 gm.; isopropylphenazone, 0.075 gm.; caffeine, 0.030 gm.

INDICATIONS: Conditions responding to an analgesic.

DOSAGE: 1-2 tablets three times a day.

HOW SUPPLIED: In containers of 100 tablets.

FIRST ISSUED: April 1960.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

SULPHAMAGNA

MANUFACTURER: John Wyeth & Brother, Ltd., Clifton House, Euston Road, London, N.W.1.

DESCRIPTION: A pleasant-tasting, chocolate-coloured suspension each 30 mils of which contains 2 gm. of activated attapulgite; 0.2 gm. of streptomycin base (as sulphate); 2 gm. of phthalylsulphathiazole, and 0.5 gm. of sulphadiazine.

INDICATIONS: Diarrhoea, regardless of aetiology.

DOSAGE: Adults: Two tablespoonfuls three or four times a day.

Children: up to 2 years, $\frac{1}{2}$ -1 teaspoonful; 2-8 years, 2 teaspoonfuls; 8-12 years, 3 teaspoonfuls—all three times a day. 12 years and over, adult dose.

HOW SUPPLIED: In bottle of 114 mils.

SUPPLY RESTRICTIONS: P.I., S.4B.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

DECADRON skin lotion

MANUFACTURER: Merck Sharp & Dohme, Ltd., Hoddesdon, Herts.

DESCRIPTION: Lotion, each mil containing 1 mgm. of dexamethasone 21-phosphate.

INDICATIONS: Contact Dermatitis: Allergic reactions to: drugs, cosmetics, clothing materials, food, soaps. Atopic Dermatoses: Allergic eczema, neurodermatitis, eczematoid dermatitis, food eczema, infantile eczema, pruritis with lichenification. May be helpful in psoriasis, especially during an acute phase. Miscellaneous: Seborrhoeic dermatitis, otitis externa, insect bites, prickly heat, intertrigo, sunburn, non-specific anogenital pruritis.

METHOD OF USE: Apply two or three times a day.

HOW SUPPLIED: In plastic squeeze bottle of 15 mil.

FIRST ISSUED: May 1960.

SUPPLY RESTRICTIONS: Therapeutic Substances Act.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

PRED SOL injection

MANUFACTURER: Glaxo Laboratories, Ltd., Greenford, Middlesex.

DESCRIPTION: 1-mil ampoules, each containing 20 mgm. of prednisolone as prednisolone disodium phosphate in a buffered solution ready for use.

INDICATIONS: In emergencies, for treatment of severe shock arising from surgical or accidental trauma, blood loss, burns or overwhelming infections; acute adrenal failure as in Addison's disease, Simmond's disease, following adrenalectomy and when adrenocortical function has been suppressed by prolonged cortisone therapy as in rheumatoid arthritis. In status asthmaticus, acute allergic reaction, including drug allergies and in the Waterhouse Friderichsen syndrome.

DOSAGE: By intravenous injection, 1-5 mil (20-100 mgm.) repeated until response occurs. Higher doses if required. Maintenance: 1 mil at suitable intervals. Can be added to blood transfusion if desired. Subconjunctivally: 1-mil doses. Soft tissue lesions 0.5-1 mil.

HOW SUPPLIED: In box of six 1-mil ampoules and pack of a single 1-mil ampoule. FIRST ISSUED: May 1960.

SUPPLY RESTRICTIONS: Therapeutic Substances Act.

NOTES: To be protected from light and stored in a cool place.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

SURFADIL

MANUFACTURER: Eli Lilly & Co., Ltd., Kingsclere Road, Basingstoke, Hants.

DESCRIPTION: Cream containing: Cyclomethycaine 0.5 per cent.; phenylpyramine 2 per cent. A combination of a surface anaesthetic and an antihistaminic in a vanishing cream base.

INDICATIONS: Irritant skin conditions due to: Allergy; insect bites; sunburn; contact dermatitis; pruritus ani; eczema; infantile eczema; herpes zoster.

METHOD OF USE: To be applied two or three times a day.

HOW SUPPLIED: In tubes of 1 oz.

FIRST ISSUED: May 1960. SUPPLY RESTRICTIONS: P.I.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

RIKOSPRAY benzocaine

MANUFACTURER: Riker Laboratories, Ltd., Morley Street, Loughborough, Leics.

DESCRIPTION: A self-propelled aerosol specifically designed for topical application as an emollient analgesic and containing 20 per cent. of benzocaine; 0.1 per cent. w/v of cetyl pyridinium chloride; and water-miscible base to 100 per cent.

INDICATIONS: In gynaecological examinations of sensitive patients; for greater post-operative comfort in gynaecology and proctology; and to facilitate cleansing in "gravel rash."

METHOD OF USE: The product is sprayed on as required.

HOW SUPPLIED: In 6-oz. pressurised canister.

FIRST ISSUED: June 1960.

NOTES: Removed, if necessary, by swabbing with warm water or saline.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

RIKOSPRAY silicone

MANUFACTURER: Riker Laboratories, Ltd., Morley Street, Loughborough, Leics.

DESCRIPTION: A self-propelled aerosol protective specifically designed for topical use, and containing 0.5 per cent. of aluminium dihydroxy allantoinate; 0.1 per cent. of cetyl pyridinium chloride; 1 per cent. v/v of terpineol; and silicone vehicle to 100 per cent.

INDICATIONS: For the prevention and treatment of bed sores, particularly in incontinent patients; prevention and treatment of napkin rash; and colostomy hygiene.

METHOD OF USE: Pressure points are sprayed twice daily for at least a week; thereafter once daily is usually sufficient.

HOW SUPPLIED: In 6-oz. pressurised canister.

FIRST ISSUED: June 1960.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

DIOTROXIN

MANUFACTURER: Glaxo Laboratories, Ltd., Greenford, Middlesex.

DESCRIPTION: White tablets, each containing 90 microgm. of L-thyroxine sodium and 10 microgm. of L-triiodothyronine (liothyronine) sodium.

INDICATIONS: Myxoedema and other forms of hypothyroidism.

DOSAGE: Usually 2-3 tablets daily but doses vary from 1-5 tablets a day. Uncomplicated hypothyroidism of short duration: Initially, 1-2 tablets daily, dosage being increased if necessary. Myxoedema of long standing (and when there are cardiovascular complications): Initially, $\frac{1}{2}$ -1 tablet may be given, increasing at weekly intervals until optimal responses are attained. Continued maintenance therapy: Dosage must be adjusted to the individual.

HOW SUPPLIED: In bottles of 100 and 1,000.

FIRST ISSUED: June 1960.

SUPPLY RESTRICTIONS: S4B.

NOTES: As daily dosage is cumulative, the full effect may not be seen for two or three weeks or longer. Patients must therefore, be observed regularly after each dosage adjustment. If too rapid an increase in metabolism is produced (causing tremors, nervous irritability, insomnia, palpitations, tachycardia, diarrhoea, loss of weight or sometimes angina), dosage must be reduced or stopped for a few days and then reassessed. Particular care is needed when there are cardiovascular complications.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

ETISUL T

MANUFACTURER: Imprial Chemical Industries, Ltd., pharmaceuticals division, Wilmslow, Ches.

DESCRIPTION: A cream containing in each "one-unit dose" 5 gm. of diethyl dithiolisophthalate.

INDICATIONS: Tuberculosis of the skin, especially lupus vulgaris.

METHOD OF USE: A unit dose of cream should be massaged vigorously into the skin avoiding hair of the head or body.

HOW SUPPLIED: In tube containing 5 gm. of active agent.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

TERSAVID

MANUFACTURER: Roche Products, Ltd., 15 Manchester Square, London, W.1.

DESCRIPTION: Tablets each containing 50 mgm. of 1-benzyl-2-pivaloylhydrazine as the hydrochloride, a mono-amine oxidase inhibitor giving symptomatic relief in angina pectoris.

INDICATIONS: Symptomatic relief of angina pectoris.

DOSAGE: Three to six tablets (150-300 mgm.) daily as a single dose or as divided doses until optimal effect is obtained. Then a daily maintenance of one to four tablets (50-200 mgm.).

HOW SUPPLIED: In packings of fifty and 250 tablets.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

SOVENTOL C

MANUFACTURER: Knoll, Ltd., 20 Gerrard Street, London, W.1.

DISTRIBUTOR: Pharmethicals (London), Ltd., 20 Gerrard Street, London, W.1.

DESCRIPTION: Dragees each containing 25 mgm. of Soventol hydrochloride (N-phenyl-N-benzyl-4-amino-1-methyl-piperidine hydrochloride) and 20 mgm. of β -cyclohexyl-isopropyl-methylamine hydrochloride.

INDICATIONS: Treatment of pruritus and of all allergic and hypersensitivity reactions.

DOSAGE: One to three dragees repeated every 6 hours as required.

HOW SUPPLIED: In tube of twenty and bottle of 200.

THE CHEMIST AND DRUGGIST Guide to New Medicaments, July 2, 1960.

PRIATAN

MANUFACTURER: Knoll, Ltd., 20 Gerrard Street, London, W.1

DISTRIBUTOR: Pharmethicals (London), Ltd., 20 Gerrard Street, London, W.1.

DESCRIPTION: Tablets each containing: 0.015 gm. of l-3,4-Dimethyl-5-phenyl-2-iminothiazolidine-hydrothiocyanate; 0.015 gm. of l-Ephedrine-hydrothiocyanate; 0.05 gm. theophylline; 0.4 gm. phenazone. Each gram of solution contains: 0.03 gm. of l-3,4-Dimethyl-5-phenyl-2-iminothiazolidine-theophylline-7-acetate; 0.03 gm. of l-Ephedrine-theophylline-7-acetate. Each ampoule contains in 1 ml: 0.03 gm. of l-3,4-Dimethyl-5-phenyl-2-iminothiazolidine-theophylline-7-acetate; 0.03 gm. of l-Ephedrine-theophylline-7-acetate.

INDICATIONS: Bronchial asthma; cardiac asthma; bronchitis (acute, chronic, spasmodic, associated with tracheitis, etc.).

DOSAGE: Adults: Prophylaxis and mild distress, $\frac{1}{2}$ -1 tablet, if necessary, several times daily. To abort an asthmatic seizure, 1-2 tablets. Inhalation (aerosol) therapy using solution may be employed, under medical supervision. Inhalation may be extended up to 10 minutes (=2 ml). The usual dose of solution is 10-20 drops in some fluid, 3-4 times daily. Doubled if need be and repeated 3-4 times in a day. Subcutaneous, intramuscular or intravenous injection of 1 ml controls an attack; in severe cases, 2-3 ampoules intravenously, may be used. Children: $\frac{1}{4}$ - $\frac{3}{4}$ the corresponding adult dose according to age. 4-10 drops of solution may be administered orally 5 times daily; or, inhalation over 10-15 minutes (= $\frac{1}{2}$ -1 ml) may be used.

HOW SUPPLIED: In tube of twenty and bottle of 200 tablets. In bottles of ten and 100 gm. of solution. In boxes of six and thirty ampoules.

PHARMACEUTICAL SOCIETY OF IRELAND

Monthly meeting of Council

AT the June meeting of the Council of the Pharmaceutical Society of Ireland, Mr. H. P. Corrigan (president) in the chair, a letter was read from the registrar of the Apothecaries' Hall, Dublin, stating that its court of governors had agreed to proposals put forward by the Pharmaceutical Society in connection with the new Pharmacy Amendment Bill, and was informing the Department of Health accordingly.

MR. M. POWER drew attention to an advertisement in the trade Press in which, he said, the title of the Society had appeared at the head, while the business address of the person signing it had been attached.

Following a lengthy discussion, in which the action of the person responsible was condemned, it was unanimously agreed that the president should interview him and convey the Council's disapproval of his action, pointing out that they had taken a serious view of his conduct. It was also decided to bring the code of rules governing conduct of all such bodies to the notice of all committees operating under the Council.

MR. G. C. O'NEILL said it should be made clear to all committees that the Council was the paramount body, and MR. M. COSTELLO said that the only people to sign statements published under the heading of the Society should be the president and registrar. Only in May he had had occasion to refer to a somewhat similar breach, not knowing at the time that the Council would run into the present situation. The sooner they insisted that under no circumstances should correspondence from any of the various groups in pharmacy bear the address of the Society the better. As custodians of the good name of the Society he believed they should be given a preview of all correspondence emanating from the address 18 Shrewsbury Road. In the present case no proof of the advertisement had been submitted in advance to the Council, who had no way of knowing if they would approve of it before publication. If they had no control over matters like that they were only wasting time trying to look after the good name of the Society.

MR. M. L. CASHMAN agreed that they should not allow the title of the Society to be used in such manner, especially as they had not an opportunity of seeing the contents of the publication in advance.

MR. V. G. McELWEE said it should be made known to the person responsible that he had incurred the displeasure of the Council, and MR. J. GLEESON said the Council must be zealous in guarding the rights and privileges of the Society and should make it clear to all that they exercised complete control in this respect.

THE REGISTRAR reported that the First Professional examinations had commenced the previous day and would continue until the end of the month. The Second Professionals would be staggered towards the end of the month and the beginning of the next. The Assistants' examinations would be held later on.

Pharmacists on Health Councils

A letter from the Department of Health regarding appointment of members to Consultative Health Councils pointed out that local authorities had at present an absolute discretion in the selection of two representatives to those committees. THE REGISTRAR said he had been informed by Mr. F. Loughman that, to get a pharmaceutical chemist appointed on each committee, it would be best if local associations contacted county councillors direct, rather than that the Society should write to the county managers. It was agreed to write to the local associations on those lines.

A letter was received from the Association of Irish Pharmaceutical Industries enclosing a copy of a letter sent

to the Department of Health in which it was stated that members welcomed reports of the intention to establish a pharmaceutical control laboratory and would be glad if representatives of the Association were invited to any discussions that might be arranged in consequence.

A Problem in Rural Areas

MR. P. G. Garahy, Enniscorthy, wrote stating that, at a meeting of the County Wexford Pharmaceutical Association in New Ross, a discussion had taken place on the poisons laws, and it was felt that the strict observance of the pharmacy laws would be made easier in rural areas if sulphonamides for veterinary use were made Part II poisons. The letter added that the Association had agreed to nominate Mr. Michael Fortune, Main Street, Wexford, for election on the Consultative Health Committee for the county. THE REGISTRAR said he had replied stating he did not think it was possible just now to do anything about making the sulphonamides a Part II poison. He further explained that, under the 1870 Pharmacy Act, it was possible to have a drug put on schedule, but there was no machinery for moving it. The sulphonamides were Part I and could not be made a Part II poison until the new Pharmacy Act became law.

It was unanimously agreed on the proposal of THE PRESIDENT, seconded by MR. COSTELLO, to appoint the dean (Dr. R. F. Timoney) as the Council's representative on the Therapeutic Substances Advisory Committee set up by the Department of Health.

THE REGISTRAR reported on the deaths of Messrs. Joseph Gorry, James Ernest Scott, Pierce Power and William A. Batty. On the motion of THE PRESIDENT, sympathy was expressed at the death of Mr. W. E. Elder, Aberdeen (a member of the Council of the Pharmaceutical Society of Great Britain), and the registrar was instructed to send letters of condolence to Mrs. Elder and to the Council of the Pharmaceutical Society of Great Britain. Sympathy was also voted to the family of the late Mr. Gorry (a former member of Council).

The Licence certificates of Julius T. L. Darko, Brigid Ann Keenan and Padraig O'Malley were signed and sealed, THE REGISTRAR remarking that Mr. Darko was the first African student to qualify in Dublin.

The following were granted preliminary registration:—Godfrey Samuel Beecham, Kumasi, Ghana (Pharmaceutical Chemists' Preliminary Register); John Martin F. Leonard, Peafield House, Ballysimon, Limerick, and Miss Mary Reilly, Granard, co. Longford (Pharmaceutical Assistants' Preliminary register).

The following changes of address were noted:—Mrs. Mary Frances O'Callaghan, L.P.S.I., to Bank House, Abbeyfeale, co. Limerick; Dr. Daniel McAlister, M.P.S.I., to 25 Fair Street, Drogheda, co. Louth; Padraig O'Briain, M.P.S.I., to 46 Eaton Square, Terenure; Mrs. Mary Theresa O'Brien, L.P.S.I., to 46 Eaton Square, Terenure; John O'Beirne, M.P.S.I., to 5 Haven Close, Grasscroft, nr. Oldham, Lancs, England; Maurice J. Toomey, L.P.S.I., to Omeath, Shannonville, Ennis Road, Limerick, and Joseph B. Murphy, M.P.S.I., to 4 Pearse Square, Ballyphehane.

It was agreed to elect the following to membership:—Mrs. Eileen T. Cronin, Miss Ita Moriarty, Mr. Thomas Fahey and Mr. Maurice Power.

The following were nominated for membership:—Dr. Mary M. Costello, Galway; Maire Ni Ceocain, Mala, Corcaigh; Richard Goold, Meagher's Pharmacy, Baggott Street, Dublin; Thomas J. Leahy, 289 Navan Road, Dublin; John O'Beirne, 5 Haven Close, Grasscroft, nr. Oldham, Lancs, and Hubert Gaffney, 89 Upper Drumcondra Road, Dublin.

L.A.H. certificates having been submitted, the following

were registered as Pharmaceutical Chemists:—Drs. Maire Kearney, Ormeau Road, Belfast; Henry Murphy, High Street, Kilkenny; and John Walshe, Birr, co. Offaly.

THE REGISTRAR said he had received a letter regretting inability to attend from Mr. T. R. Miller, whose co-director (Mr. Ronald Bruce Brown) had died recently.

PHARMACEUTICAL SOCIETY OF NORTHERN IRELAND

Monthly meeting of Council

AMOTION that the Council of the Pharmaceutical Society of Northern Ireland should set up a general purposes committee, consisting of past presidents, to consider and make recommendations upon matters not within the province of committees already appointed, was discussed at the monthly meeting of the Council in Belfast on June 16.

The motion was in the name of MR. G. E. MCILHAGGER, who said he felt such a step would be useful. MR. C. A. QUINN (a past-president) did not agree that such a committee should be confined to past-presidents. There might be other members, he said, who could usefully contribute to it. Supporting Mr. Quinn's view, MR. N. COOPER said he did not see what changes had taken place to make a general purposes committee necessary but, if such changes had taken place, he felt the committee should be elected by the Council rather than in the manner proposed in the motion.

For and Against a Standing Committee

MR. H. BOYD said he did not feel it was necessary to appoint a standing committee. It could perhaps be an understood thing that the past-presidents should meet at a stated time to make recommendations to the Council for the purposes of electing new officers. That would be about the only function a general purposes committee could perform.

It was pointed out to the members that a general purposes committee that had existed some years earlier had been allowed to lapse because there was nothing for it to do. MR. MCILHAGGER said the Council and incoming presidents would benefit from having consideration given to the policy stated on the election of new presidents and the co-option of new members following sudden deaths, resignations or retirements. He assured the meeting that there was nothing sinister in his proposal. He was only bringing into the open something that had been a problem for a number of years.

MR. JACK GORDON supported the motion, saying it would make the Council more democratic. Even if the committee did consist of past-presidents, junior members could be sounded for their views.

MR. H. G. CAMPBELL supported the principle behind the proposal but thought the title of the committee should be more specific. MR. J. KERR also supported the idea behind the proposal.

After further discussion it was agreed that Mr. McIlhagger, who had had to leave the meeting during the debate, should be asked to rephrase his proposal, and that the matter should be discussed at the next meeting.

The Council had before it a letter from Mr. R. J. Scott, who in 1959 was awarded the Theophilus Harper Foundation, asking if the Foundation could be awarded to him for another year. There were also letters from Dr. A. H. Beckett (Chelsea College of Science and Technology) saying he would be prepared to accept Mr. Scott as a research student for 1960-61, and from Dr. Harper (Mr. Scott's adviser of studies) recommending the renewal of the foundation for another year. On the motion of MR. H. G. CAMPBELL, seconded by MR. W. P. EWART, it was agreed to renew the Foundation for another year.

Present were Messrs. M. Costello, K. Banks, M. L. Cashman, C. J. Cremen, J. Gleeson, D. J. Kennelly, V. G. McElwee, G. C. O'Neill, T. B. O'Sullivan, M. Power and J. Power

At a meeting of the Benevolent Fund which followed, grants totalling £72 were passed for payment.

THE SECRETARY (Mr. W. Gorman) reported that a letter

had been received from the Ulster Chemists' Association about a member who had had to attend court proceedings to give evidence in connection with a burglary at his premises. The expenses offered to the member were considered completely inadequate and the Council was asked to take up the matter of court expenses generally with the appropriate authority. The secretary was accordingly instructed to write to the Ministry of Home Affairs giving the Council's opinion as to what would constitute a reasonable sum for expenses and to ask if the Ministry would approve that amount.

The Council granted applications for restoration to the register from J. Gibson Kennedy, Carnmoney, co. Antrim; A. E. Staunton, Warrenpoint, and Robert Kells, 3 Castle-reagh Street, Belfast.

Dr. R. G. R. Bacon presented a report from the House Committee on the Committee's inspection of the Society's premises on May 12, and made certain recommendations regarding renovations and redecorating. It was agreed to proceed with the recommendations, and the secretary was authorised to seek estimates of the cost of the work.

Accounts totalling £250 14s. 9d. were passed for payment.

A proposal by THE PRESIDENT (Mr. J. Caldwell) that a letter of sympathy should be sent to the family of the late Mr. W. E. Elder, Aberdeen, was adopted.

At question time MR. BOYD said everyone regretted the passing of Mr. Charles Young. It had been suggested to him that, as Mr. Young had been for a long time a lecturer in Belfast College of Technology, there should be some lasting memorial to him. He thought that, if a sum of money could be collected and invested, the interest could be passed on to the college as a Charles Young Foundation for research work. He suggested that a small committee should be appointed to consider the matter and make a recommendation as soon as possible.

It was agreed to refer the matter to the Finance Committee for initial consideration, and that the committee should nominate other interested persons outside the Council who would be invited to join a larger committee that would formulate proposals to organise the collection for the memorial and suggest the form it should take.

ECHOES OF THE PAST

TO CEASE THE HICCOUGH

From *Sylvarum by Francis Bacon, London, 1676.*

It hath been observed by the *Ancients*, that *Sneezing* doth cease the *Hiccough*. The *cause* is, for that the *Motion* of the *Hiccough* is, a lifting up of the *Stomach*; which *Sneezing* doth somewhat depress, and divert the *motion* another way. For first, we see that the *Hiccough* cometh of *fullness* of *meat*, (especially in *Children*) which causeth an extension of the *Stomach*: We see also, it is caused by *acide Meats* or *Drinks*, which is by the pricking of the *Stomach*. And this *motion* is ceased, either by *Diversion*, or by *Detention* of the *Spirits*: *Diversion*, as in *Sneezing*; *Detention*, as we see *holding* of the *Breath* doth help somewhat to cease the *Hiccough*, and putting a *Man* into an earnest study doth the like, as is commonly used: And *Vinegar* put to the *Nose*-*trils* or *Gargarized* doth it also; for that it is *Astringent*, and inhibiteth the *motion* of the *Spirit*.

NOTES ON NEW MEDICAMENTS

ACTRIOL.—*Chemistry:* 16-Epi-estriol, a substance that occurs naturally in small amounts in pregnancy urine. It has weak oestrogenic properties generally, but little endometrial action. When applied to the skin it can neutralise any excess of circulating androgens locally without any systemic action. That is the basis of its use in acne, as the condition is due to a plugging of the skin follicles by excessive sebaceous activity due to hormone imbalance. Another hormone preparation used for acne is Gonadyl tablets. Those contain serum gonadotrophin. (Published May 21.)

AKINETON.—*Chemistry:* 3-Piperidine-1-phenyl-1-bicycloheptenyl-propanol. Having both anticholinergic and nicotinolitic properties, the compound has a marked action in controlling the spasms of Parkinson's disease. Its use avoids the troublesome side effects of the belladonna alkaloids, also widely used, and causes but slight visual and salivary disturbances. Other drugs used in Parkinson's syndrome include benzhexol (Artane), benztropine (Cogentin), phenglutarimide (Aturbane), procyclidine (Kemadrin), orphenadrine (Disipal, Norflex) and ethopropazine (Diparcol).

DEPO-MEDRONE.—Methyl prednisolone acetate in aqueous suspension. The product has a rapid action, with a sustained effect, and is suitable for local injection into joints, and for intramuscular injection when an extended systemic action is required. Other long-acting products include Precortisyl (prednisolone acetate), Ultra-cortenol (prednisolone trimethylacetate) and hydrocortisone T.B.A. (hydrocortisone tributyl acetate). (Published April 2.)

DI-ADEMIL-K.—*Constituents:* Hydroflumethiazide and potassium chloride. The former is a derivative of chlorothiazide with markedly increased potency. It also causes less potassium loss than the parent drug, but for prolonged therapy, and to guard against hypokalaemia, some supplementary potassium may be required, and Di-Ademil-K represents such a combination. Esidrex-K and Hydrosaluric-K are basically similar, but contain hydrochlorothiazide instead of hydroflumethiazide. Another point of difference is that the potassium salt is present as an enteric-coated core, by which absorption is delayed, and possible nausea is reduced. Salupres is a similar cored product, but contains both hydrochlorothiazide and reserpine in the shell of the tablet.

ETISUL T.—*Chemistry:* Diethyl dithiobisophthalate. Having a high degree though a restricted range of antibacterial activity, the compound is effective against *Mycobacterium tuberculosis* and *Mycobacterium leprae*. After absorption, the drug is broken down in the body to ethyl mercaptan, to which the activity of the drug appears to be due. Other drugs used in the appears to be due.

FALAPEN.—*Constituent:* Benzyl penicillin. It is often difficult to maintain an adequate blood level of penicillin by the oral use of benzyl penicillin both because of the rapidity of absorption and the rate of destruction by gastric enzymes. Falapen represents an attempt to achieve a steadier blood level by the use of a cored tablet. The penicillin in the outer shell is absorbed rapidly, but that in the core is protected by a new type of coating, referred to as polymer 37. This coating is insoluble in gastric juice, but dissolves easily in the alkaline secretion of the gut. The rate of absorption is further delayed by the use of solubility controlling substances. Chemical modification of penicillin also influences absorption and rate of breakdown. Phenoxymethyl penicillin is present as the potassium salt in Distaqaine V-K, V-Cl-K and Compocillin V-K; hydramine penicillin V is available as Compocillin V. Penidural contains benzathine penicillin and Broxil is the postassium salt of 6 (phenoxypyropionamido) penicillanic acid.

GEWODIN.—*Chemistry:* 3 N-methyl-(methyl- β -phenyl) ethyl aminomethyl-4-isopropylnorphenazone. The substituent in the 3-position has a structure also found in methylamphetamine, and the compound may be regarded as a combination of an analgesic and a sympathomi-

metic amine. The analgesic action is increased by the inclusion in the formula of paracetamol and isopropyl phenazone, while any central depression which is often caused by analgesics, is offset by the stimulant action of caffeine, and the effects of the sympathomimetic moiety of the main constituent. Other analgesic compounds containing more than one substance are represented by Valtorin (chlorphenoxazin with phenacetin) and Zactirin (ethoheptazine and acetylsalicylic acid).

MEDRO-CORDEX.—*Constituents:* Methyl prednisone and acetylsalicylic acid. The value of salicylates in various rheumatic conditions is well known. In those cases where salicylates alone are insufficient, the addition of a corticosteroid affords greater relief and control. The newer compounds, when used in that way, are effective in low dose, and undesirable systemic effects are unlikely. Predasin, Cordex and Deltagycortril are similar products, but they contain prednisolone, and prednisone with aspirin is also available. Hydrodyne contains acetylsalicylic acid and hydrocortisone. Chloroquine is present with prednisone and acetylsalicylic acid in Elestol. (Published April 2.)

NEUTRAPEN.—*Constituent:* Penicillinase. An enzyme produced by a variety of Gram-positive and Gram-negative organisms usually obtained from cultures of *Bacillus cereus*. It has the specific property of neutralising the antimicrobial activity of penicillin by converting the antibiotic into the inert penicilloic acid by opening the β -lactam ring. This is the basis of its use in the treatment of allergic reactions to penicillin. The formation of the enzyme by bacteria plays a significant part in their resistance to penicillin. Penicillinase is used in the B.P. test for the sterility of penicillin, but Neutrapen is a purified injectable form of the enzyme. The substance is a protein with a molecular weight of about 50,000 and occasionally may cause an antigenic reaction by virtue of its protein nature.

NORADREN BITABS.—*Constituents:* Isoprenaline, contained in a sublingual tablet, and ephedrine, theophylline and papaverine in an oral tablet. The combination of bronchidilators and spasmolytics is designed to provide prompt relief from use of the sublingual tablet, with a sustained effect from the constituents of the oral tablet. In Bitabs Nocte the sublingual dose is omitted, and the other constituents are given as two oral tablets, one of which is uncoated but contains a small dose of phenobarbitone. The second tablet, without phenobarbitone, is enteric-coated, and is designed to maintain the anti-asthmatic action for eight hours or so. Isobronchisan is both a sublingual and an oral tablet, and has similar constituents to Noradren Bitabs. The tablet is first placed under the tongue to dissolve the isoprenaline in the outer coat, and then swallowed to obtain the effects of the other constituents. Fydalex is a multilayered tablet, containing isoprenaline in the outer coat, carbromal in the middle, and ephedrine and theophylline in the centre as enteric-coated granules. Fydal is similar, with butobarbitone replacing carbromal. (Published April 2.)

PRIATAN.—*Chief constituent:* 2-Imino-3,4-dimethyl-5-phenyl-thiazolidine hydrothiocynate, a substance with a number of properties of pharmacological interest. It has spasmolytic, antihistaminic, antiallergic and antisecretory activity. For the treatment of bronchial asthma, those actions are augmented by the inclusion of ephedrine, theophylline and phenyl dimethyl pyrazolone. Ephedrine and theophylline are present in many other preparations designed to achieve a combined therapeutic effect, and Fydal, Fydalex, Isobronchisan, Franol and Tedral are examples of such products, some of which are formulated to have an extended action.

SOVENTOL.—*Chemistry:* N-Phenyl-N-benzyl-4-amino-1-methylpiperidine. An histamine antagonist, the substance suppresses by its action the anaphylactic reactions that follow histamine release. It also has antispasmodic and antipruritic activity, and some central sedative action. In Soventol C the sedative effect is offset by the inclusion of β -cyclohexylisopropyl

methylamine, a mild central stimulant. A number of other antihistamines have antipruritic properties. Other products for external use include Teevex, Eurax, Polycrest and Viacutan.

SURFADIL.—*Constituents:* Cyclomethycaine and thienylpyramine. The former is an anaesthetic related to piperocaine, but suitable for local use only. As it is not a derivative of p-aminobenzoic acid, it does not affect, and is not affected by the sulphonamides. Thienylpyramine is an antihistamine which also possesses some local anaesthetic potency.

TECALDRINE.—*Constituents:* Methapyrilene, dextromethorphan and expectorants. Methapyrilene is one of the milder antihistamines; dextromethorphan, which is closely related to the analgesic levorphanol, has specific antitussive properties, but no significant narcotic or analgesic action. Methapyrilene is present together with codeine and ephedrine in Histadyl EC and dextromethorphan alone is issued as Romilar. (Published Feb. 6.)

TERSAVID.—*Chemistry:* 1-benzyl-2-pivaloylhydrazine. Inhibits the action of monoamine oxidase, the enzyme concerned with the de-activation of certain amines that occur in the brain and other tissues; suppression of its activity enables the amines to exert a longer action. A number of such inhibitors are used in mental disorders, and also in angina pectoris. In the latter condition the central stimulant action of these inhibitors may be undesirable, as it may encourage anginal patients to unwise activity. Tersavid has no significant euphoric action, and so has a more specific effect in relieving anginal pain. Marplan (isocarboxazid) and Marasil (iproniazid) are examples of related compounds which have a similar action in angina. These drugs, however, have a less specific action, and side effects may be undesirable.

VERSITOL.—Protein hydrolysate, containing aminoacids and polypeptides. As proteins must be broken down by the digestive processes before they can be absorbed as the constituent amino-acids, protein hydrolysates represent a pre-digested form of alimentation. Such products are of value when normal digestion is impaired or metabolic demands are high. Aminosol Vitrum is a similar product in powder form. Aminosol solution and Aminosol Vitrum infusion are solutions of protein hydrolysates intended for intravenous injection; Trophysan is a solution of the individual amino acids together with trace elements and vitamins. (Published May 21.)

AMERICAN APPROVED REMEDIES

DEXCHLORPHENIRAMINE MALEATE (polaramine maleate).—*Chemically:* d-[p-Chloro-a-(2-dimethylaminomethyl) benzyl] pyridine maleate, the dextrorotatory isomer of racemic chlorpheniramine maleate, in which isomer pharmacological studies have shown antihistaminic activity primarily to reside. The drug is administered orally. For adults, the usual dose is 2 mgm. three or four times daily reduced to one-half for children under twelve years of age and to one-fourth for infants. Available as syrup (0.4 mgm. per ml), as 2-mgm. tablets, and as repeat-action tablets (4-mgm. and 6-mgm.). *Data supplied by Schering Corporation.*

SULPHINPYRAZONE (Anturan).—*Chemically:* 1,2-Diphenyl-4-(2'-Phenylsulphinethyl)-3,5-pyrazolidinedione, a uricosuric agent of value in the treatment of gout. The analgesic relief missing in it is provided by concomitant administration of colchicine, etc. Antagonised by salicylates. Available as 100-mgm. tablets. *Data supplied by Geigy Pharmaceuticals, division of Geigy Chemical Corporation.*

TRIMETHOBENZAMIDE HYDROCHLORIDE (Tigan hydrochloride).—*Chemically:* N-(Di-methylaminoethoxy benzyl)-3,4,5-trimethoxybenzamide hydrochloride. An antiemetic substance that may be administered orally, rectally or intramuscularly. Available as 100-mgm. capsules; as 200-mgm. suppositories; and as an injection solution containing 200 mgm. in 2 mils. *Data supplied by Roche Laboratories division of Hoffmann-LaRoche, Inc.*

TRADE REPORT

The prices given are those obtained by importers or manufacturers for bulk quantities or original packages. Various charges have to be added whereby values are in many instances augmented before wholesale dealers receive the goods into stock. Crude drugs and essential oils vary greatly in quality and higher prices are charged for selected qualities.

LONDON, JUNE 29: Though trading in CRUDE DRUGS during the week continued dull, prices of most commodities, when tested, proved remarkably steady.

Brazilian MENTHOL was dearer by six-pence per lb. both in bond and at origin. White PEPPER during the past two weeks has sharply advanced. Although there is not really any shortage of stocks on the spot supplies are very firmly held; meanwhile shipment quotations have begun to sag. TURMERIC for shipment was quoted at 93s. 6d. per cwt., c.i.f. (against 87s. 6d.). IPECACUANHA values showed a slight easing on those quoted previously but there was no Nicaraguan material being offered, nor was any accepted before September. HONEY has now become a firm market, a shortage having developed, particularly so in the Australian medium-amber. SENEGA was offering at 18s. per lb., c.i.f.

In ESSENTIAL OILS the price of LEMONGRASS was again firmer by three-pence per lb. Ceylon CITRONELLA was down twopence per lb. on the spot and Brazilian PEPPERMINT by three-pence for shipment.

POTASSIUM IODIDE was marked up by ninepence per kilo by some manufacturers and others are expected to follow the new rates. A good call for certain seasonal articles was noted.

Pharmaceutical Chemicals

ACETANILIDE. — Crystals, One-cwt. lots, 2s. 10d. per lb.; 5-cwt., 2s. 9d.

ANEURINE HYDROCHLORIDE. — 1-kilo, £11 15s.; 10-kilos, £11 7s. 6d. per kilo.

ASCORBIC ACID. — One-kilo, £3 12s.; 10 kilos; £3 10s. per kilo. SODIUM ASCORBATE is offered at the same price.

BENZYL BENZOATE. — B.P. in 1-ton lots, 4s. 6d. per lb.

BORAX. — B.P. grade, 1 ton and upwards; Granular, £56; crystals, £59 10s.; powder, £60 10s.; extra fine powder, £61 10s. per ton, all in hessian sacks. Commercial from £46 to £51 10s. per ton, as to type and packing. Dehydrated borax is £70 per ton in paper-lined hessian bags or £69 in paper bags; carriage paid in Great Britain. Surcharges for smaller quantities: Less than 1 ton but not less than 5 cwt., 1s. per cwt.; 3 cwt., 2s.; 1 cwt., 3s.

BORIC ACID. — B.P. grade in 1 ton and upwards (per ton): Granular, £91; crystals, £99; powder, £96 10s.; extra-fine

powder, £98 10s. per ton in lined hessian bags, carriage paid in Great Britain. Less £1 per ton if supplied in paper bags. Technical from £77 to £86 10s. per ton according to type and packing.

CALCIFEROL. — B.P., 3s. 3d. per gm. for 1-kilo lots.

CALCIUM PANTOTHENATE. — £8 per kilo.

CYANOCOBALAMIN. — 25-gm. lots, £39 per gm., and 1 gm., £40.

DIGOXIN. — 100-gm lots, 78s. per gm.

DIHYDROXY-ACETONE. — Per kilo £12 minimum 1 kilo lots.

ETHER. — Per lb. in winchesters: TECHNICAL B.S.S., and SOLVENT, 5-cwt. 2s. 7d.; (4s. 1d. per litre). In drums the price is 2s. 2d. per lb. ANAESTHETIC, B.P., 5-cwt., 3s. 10d.; 10-cwt., 3s. 9d.

FOLIC ACID. — B.P. and U.S.P., 1s. per gm. 1-kilo lots; smaller lots, up to 1s. 6d. per gm.

GLYCERIN. — Pharmaceutically pure (s.g. 1.2627):—

UNITED STATES REPORT

NEW YORK, JUNE 28: The price of GUM ACACIA amber sorts, at 24½ cents was down 1 cent per lb. Bourdon GERANIUM OIL advanced \$3 to \$30 per lb., a new high level. The quotation is virtually nominal in view of the shortage of materials here and at the primary centre. Lower per lb. were SPEARMINT OIL at \$9-60, down 15 cents and distilled LIME, \$6-00, down 25 cents.

In illnesses such as measles, mumps and tonsillitis, where the feeding of children is a real problem, Complan is the simple effective way of keeping youngsters fully nourished. From the critical stage of the illness right through to the final phase of convalescence, two or three cups daily of easily digestible Complan (so simply prepared and flavoured to taste) provide the high protein-vitamin-mineral intake to build up the patient and make her fully fit again. Complan—the complete answer to most feeding problems.

TRADE MARKS

APPLICATIONS ADVERTISED BEFORE REGISTRATION

From the "Trade Marks Journal," May 25
 For preparations for protecting and preserving plants; insecticides, fungicides and vermin destroying preparations, weed killers, moth repelling and destroying preparations, insect repelling preparations for human and veterinary use, and disinfectants (5)

GUESAPRIM, 800,252, by J. R. Geigy, S.A. (J. R. Geigy, A.G.), Basle, Switzerland.

For synthetic hormones, being chemico-pharmaceutical products (5)

ADROYD, 800,883, by Parke, Davis & Co., Detroit, Michigan, U.S.A., and Staines Road, Hounslow, Middlesex.

For pharmaceutical preparations and substances for human and veterinary use; and sanitary substances and disinfectants (5)

SULMOX, 801,025, by Imperial Chemical Industries, Ltd., London, S.W.1.

For flashguns for photographic purposes (9)

SPORTILUX, 799,643, by Ilford, Ltd., Ilford, Essex.

For cinematographic and photographic projectors, and frames for viewing transparencies (9)

SPORTSVIEW, 799,644, by Ilford, Ltd., Ilford, Essex.

For sterilising apparatus for surgical purposes (10)

INFERATION, 800,245, by Inferation, Ltd., Camberley, Surrey.

For surgical ligatures made of netting or in the form of bands, and surgical dressings, all made from threads or from fibrous materials; plasters (medical and surgical), and materials prepared for bandaging (5) and for surgical sutures, and bandages (10) and for combs, sponges, brushes, and materials prepared for brush-making (21)

GRINICAND, 800,715-17, GRINILIND, 800,724-26, by Veb Thuringisches Kunststoffs-werk "Wilhelm Pieck" Schwarza, Rudolstadt, Germany.

For natural sponges and cellulose sponges (21)

WILDFIRE, 801,642, by Leslie Marks & Co., Ltd., London, E.C.2.

For hairnets (26)

HEADLINERS, Z796,948, by Raywarp Textiles, Ltd., Nottingham.

From the "Trade Marks Journal," June 1

For dentifrices (3)

ASBA, 776,507, by "Asba" A. & M. Lob-Senn, Geneva, Switzerland.

For perfumes, non-medicated toilet preparations, and cosmetics (3)

RIVER OF DREAMS, 798,146, by Rimmel, Ltd., London, W.I.

For cleaning and degreasing liquids and preparations, none being for use in industrial processes or in the course of manufacture (3)

GENKLENE, 799,710, by Imperial Chemical Industries, Ltd., London, S.W.1.

For perfumes, non-medicated toilet preparations and cosmetic preparations, all for export except to the Irish Republic (3)

LANTIS, QUIVER, ATLANTIS, 801,259-61, by Reckitt, Colman, Chiswick (Overseas), Ltd., Hull, Yorks.

For pharmaceutical and veterinary preparations, all for oral administration (5)

DASCOTE, 789,538, by Universal Laboratories, Ltd., Folkestone, Kent.

For herbicides (5)

PABRACE, 791,853, by Paul Bracey, Landford, Salisbury, Wilts.

For preparations for killing weeds and destroying vermin and being for sale in England, Scotland and Wales (5)

FISONS CHECK, 794,900, FISONS TIP TOP, 794,902, by Fisons, Ltd., Felixstowe, Suffolk.

For pharmaceutical preparations for internal human use (5)

MINAVAL, 796,054, by Glaxo Laboratories, Ltd., Greenford, Middlesex.

For all goods (5)

VIMERAL, 796,055, by Glaxo Laboratories, Ltd., Greenford, Middlesex, THESIS, 799,008, by Desitin-Werk Carl Klinke, G.m.b.H., Hamburg-Othmarschen, Germany.

LEPTOVAX-PLUS, 800,640, by Wellcome Foundation, Ltd., London, N.W.1. DEQUAMIST, 801,288, by Allen & Hanburys, Ltd., London, E.2. PETTIE-MIA, 801,292, by Thomas Pettifer & Co., Ltd.

EYDON, Rugby, Warwicks, LIOFIN, 802,162, by Horlicks, Ltd., Slough, Bucks.

For medicated barrier creams (5)

DYSTAKOL, 796,658, by J. M. Loveridge, Ltd., Southampton, Hants.

For pharmaceutical preparations and substances for human and veterinary use (5)

PRIMASUL, 797,286, by Imperial Chemical Industries, Ltd., London, S.W.1.

For veterinary substances (5)

MOLACTRATE, 799,602, by W. & R. Fletcher (N.Z.), Ltd., Wellington, New Zealand.

For pharmaceutical and veterinary preparations (5)

ACHROSURGIC, 799,803, by American Cyanamid Co., New York, U.S.A.

For pharmaceutical preparations and substances (5)

NARPHEN, 800,211, by T. J. Smith & Nephew, Ltd., Hull, Yorks.

For pharmaceutical preparations and substances for human and veterinary use, all for sale in the United Kingdom (5)

RUSOVAX, 801,857, by Bayer Products, Ltd., Kingston-upon-Thames, Surrey.

For gloves of rubber for household and domestic use (21)

AYROWARE, 801,160, by Ayrton, Saunders & Co., Ltd., Liverpool, 1.

From the "Trade Marks Journal," June 8

For citric acid in tablet form for use in the manufacture of acidified milk (1)

ACILETS, 801,530, by Joh. A. Benekiser, G.m.b.H., Ludwigshafen-on-Rhine, Germany.

For all goods (3)

BURYTE, 795,689, by John Hanlon, Belfast, Northern Ireland.

For detergents (not for use in industrial or manufacturing processes) and soaps (3)

Device with words FAIRY MILD GREEN LIQUID, 796,455, by Thomas Hedley & Co., Ltd., Newcastle-on-Tyne.

For soaps, perfumes, non-medicated toilet preparations, essential oils, cosmetics, hair lotions and dentifrices, all containing honey (3)

HONEY TIME, 797,128, by Cuttlingford of Chelsea, Kirby, near Liverpool.

For soaps and detergents (not for use in industrial or manufacturing processes); and cleaning, polishing, scouring and abrasive preparations (3)

TEND, 799,492, by Co-operative Wholesale Society, Ltd., Manchester.

For technical polishing powders for optical lenses (3)

OPTIPOL, 799,634, by Potter & Clarke, Ltd., Barking, Essex.

For pharmaceutical preparations for use in the treatment of disorders of the skin, and sterilising preparations (5)

STERGENE, 783,445, by Domestos, Ltd., Newcastle-upon-Tyne, 6.

For all goods, but not including invalids' foods (5)

DIETONA, B789,732, by Nestlé Co., Ltd., London, E.C.2.

For pharmaceutical preparations for use by insertion into cavities of the human body (5)

SINCURETTE, B793,939, by Karl Wilhelm Schmidt, Nuremberg, Germany.

For all goods (5)

PARAFON, 795,613, by McNeil Laboratories, Incorporated, Philadelphia, Pennsylvania, U.S.A. KAMYNEX, 797,220, by Royal Netherlands Distilleries, Delft, Holland. RODIURAN, 799,763, by C. H. Boehringer Sohn, Ingelheim-on-Rhine, Germany.

For pharmaceutical preparations and substances for human and veterinary use, all for sale in the United Kingdom (5)

EXALDON, 796,919, by Bayer Products, Ltd., Kingston-upon-Thames, Surrey.

For pharmaceutical preparations and substances for human and veterinary use (5)

SOCATYL, 797,239, by CIBA, Ltd., Basle, Switzerland.

For pharmaceutical preparations and substances for use in the treatment of complaints of the ears (5)

OTOTRANE-C, 799,294, by Ward, Blenkinsop & Co., Ltd., London, W.C.1.

For briefs, being articles of sanitary underclothing (5)

SILCOT, 799,399, by Macdonald & Taylor, Ltd., Ashton-under-Lyne, Lancs.

For pharmaceutical preparations (5)

GEWODIN, 800,108, by Ed. Geistlich Söhne, A.G. für Chemische Industrie, Wolhusen, Switzerland.

For pharmaceutical preparations and substances (5)

LOBIDAN, 800,630, by Uni-Chemie, A.G., Zurich, Switzerland.

For insecticides, fungicides, pesticides and paratations for killing weeds and destroying vermin (5)

SNAROL, 801,518, by E. R. Howard, Ltd., Ipswich, Suffolk.

For medicated confectionery (5)

OROPLUTUS, 801,742, by Fryer & Co. (Nelson), Ltd., Nelson, Lancs.

For analgesics, being goods for sale in the United Kingdom (5)

WINALGIN, 802,353, by Bayer Products, Ltd., Kingston-upon-Thames, Surrey.

For spectacles, spectacle frames and sun glasses (9)

ATRIO, 799,372, by Atrio Optische, G.m.b.H., Solingen, Germany.

For photographic and cinematographic apparatus and instruments and parts and fittings, photographic slides and slide frames, etc. (9)

Device with words VISI TALK, 799,497, by Visual Impact Productions, Ltd., London, S.W.4.

For photographic apparatus and instruments and parts (9)

PHANTAX, 799,646, by Bradley & Bliss, Ltd., Reading, Berks.

For photographic and optical apparatus and instruments; and parts, etc. (9)

RICOHFAX, 801,796, by Riken Kogaku Kogyo, K.K., Tokyo, Japan.

For electro-medical devices for use in treating enuresis (10)

EN-U-LARM, 796,313, by Milliwatt, Ltd., London, N.W.1.

For small domestic utensils and containers (not of precious metal or coated therewith), combs and brushes; etc. (21)

HI! JEANIE, 795,963, by Viceroy Manufacturing Co., Ltd., Toronto, Ontario, Canada.

From the "Trade Marks Journal," June 15

For hand lotions, being non-medicated toilet preparations (3)

LIQUID VELVET, 788,378, by W. Aston & Co., Ltd., Worthing, Sussex.

For preparations for the permanent waving of the hair, shampoos, hair oils, non-medicated hand creams, and washing preparations (3)

GLIMOR, 794,321, by Gema Kemiska Fabrik, A.B., Falun, Sweden.

For preparations and substances for laundry use; cleaning, polishing, scouring and abrasive preparations; soaps (3)

PSY 9, 797,442, by Haus-Chemikalien, G.m.b.H., Ingelheim-on-Rhine, Germany.

For preparations and substances, all for laundry use (3)

TEXOFT, 798,090, by Boots Pure Drug Co., Ltd., Nottingham.

For detergents (not for use in industrial or manufacturing processes) (3)

BRIDGET, 798,284, by Thomas Hedley & Co., Ltd., Newcastle-on-Tyne.

For perfumes, toilet preparations (not medicated) and cosmetic preparations (3)

BOOTS SUPERGLO, BOOTS SUPER GLO, 800,234-35, by Boots Pure Drug Co., Ltd., Nottingham.

For starch and starch products (3)

Device with words GAZELLE BRAND, 800,370, by Gordon Slater, Ltd., Manchester, 2.

For perfumes, toilet preparations (not medicated), cosmetic preparations, dentifrices, depilatory preparations, toilet articles (not included in other classes), sachets for use in waving the hair, soaps and essential oils (3)

QUICK DATE, 800,468, by International Chemical Co., Ltd., London, N.16.

For hair dyes, and colouring matters for the hair (3)

IMPERIA TONAL, 801,019, by Teeda, Ltd., London, W.C.2.

For nou-medicated toilet preparations and cosmetic preparations, all for export except to the Irish Republic (3)

BATHJOY, BATHJOYS, 801,262-63, by Reckitt, Colman, Chiswick (Overseas), Ltd., Hull, Yorks.

For cosmetic preparations (not being toilet preparations) for use by persons suffering from acne (3) and for medicated preparations for use in the treatment of acne (5)

ACNELIA, 792,476-77, by Anna Pegova, Ltd., London, W.C.1.

For pharmaceutical and diagnostic preparations, all for human and veterinary use (5)

CHININO, 793,589, by Chinoin Gyogyszter és Vegyészeti Termékek Gyára Részvénnytársaság, Budapest, IV/Ujpest, Hungary.

For pharmaceutical preparations for use in the treatment of obesity (5)

STELADEX, 794,865, by Smith Kline & French Laboratories, Ltd., Welwyn Garden City, Herts.

For pharmaceutical products (5)

NOVOJECT, 794,977, by Novo Industri, A.S., Copenhagen, Denmark, ULMOSER, 801,285, by Bailly, Ltd., Alperton, Wembley, Middlesex.

For pharmaceutical preparations (5)

NIVALIN, 795,172, by Chimiko-Pharmazeutischen Zavod, Sofia, Bulgaria.

For all goods (5)

LOMOTIL, 797,008, by G. D. Scarle & Co., Skokie, Illinois, U.S.A., COMPLEGEST, 797,515, by Norgine Pharmaceutical Products (London), Ltd., London, W.C.1, EUROVACE, 798,554, by Norwich Pharmacal Co., Norwich, New York, U.S.A., FLEXILON, 799,221, by McNeil Laboratories Incorporated, Philadelphia, Pennsylvania, U.S.A., HYLOMYN, 801,211, by Calmic, Ltd., Cewc, Ches, HALGESIN, 802,890, by Ward, Blenkinsop & Co., Ltd., London, W.C.1.

For pharmaceutical preparations in tablet form (5)

TAMTABS, 798,275, by P. & I. Smith, Ltd., Bletchley, Bucks.

For pharmaceutical preparations and products, all containing sulphonamides (5)

SULPHAMAGNA, B797,447, by American Home Products Corporation, New York, U.S.A.

For pharmaceutical preparations for external use in the treatment of skin complaints (5)

SECADERM, 800,502, by Wade Pharmaceuticals, Ltd., Bishopbriggs, Glasgow.

For medical, pharmaceutical and veterinary preparations (5)

ORPHENISON, 801,374, by N.V. Koninklijke Pharmaceutische Fabrieken V/H Brocades/Stieheman and Pharmacia, Amsterdam, Holland.

For radiological contrast media (5)

INTRAPAUQUE, SOLUPAQUE, 801,585-86, by Damancy & Co., Ltd., Ware, Herts.

For pharmaceutical preparations and substances for human and veterinary use (5)

DECABOLIN, 801,748, by Organon Laboratories, Ltd., London, W.C.2.

For pharmaceutical preparations for human and veterinary use, sanitary substances, medical and surgical plasters, material prepared for bandaging, disinfectants and antiseptics (5)

SIMERODAN, TAMBROVID, 802,653-54, by J. R. Geigy, S.A. (J. R. Geigy, A.G.), Basic, Switzerland.

For photographic and cinematographic apparatus, and parts of and fittings and lenses (9)

AGNAR, B707,069, by Agfa Camera Werk München, Munich, Germany.

PATENTS

(by permission, Controller, H.M. Stationery Office)

COMPLETE SPECIFICATIONS ACCEPTED

From the "Official Journal (Patents)," June 15

N - (5-nitro-2-furyl) - alkylidene-3-amino-5-tertiary amino-methyl-2-oxazolidones and chemotherapeutic composition containing them. Norwich Pharmacal Co., 843,834.

Mycobacteriostats. Monsanto Chemicals, Ltd. 844,329.

Aromatic ethers. Soc. des. Usines Chimiques Rhône-Poulenc, 843,883.

Compositions for use in suppositories. Chemische Werke Witten, G.m.b.H. formerly Imhausen Werke, G.m.b.H. 843,886.

Morphinate derivatives and a process for the

manufacture thereof. F. Hoffman-La Roche & Co., A.G. 843,752.

Insulin preparations and process for preparing same. Organon, N.V. 844,434.

Synthesis of steroids. Olin Mathieson Chemical Corporation, 843,773.

Process for the manufacture of diphenyl ethers. Farbwerke Hoechst, A.G. vorm. Meister, Lucius & Brüning, 843,695.

Substituted azacycloheptanes. American Home Products Corporation, 843,924.

Pyrazolone derivatives. Sandoz, Ltd. 843,690.

Substituted 3,5-diketopyrazolidine. Sandoz, Ltd. 843,691.

Preparation of 3β-hydroxy-6-methyl-25D-spiro-5-ewe or the β-acyl derivatives thereof. The British Drug Houses, Ltd. 843,664.

Biguanide salts. Imperial Chemical Industries, Ltd. 843,676.

Process for the manufacture of gibberellic acid. Imperial Chemical Industries, Ltd. 844,341.

Sulphonyl derivatives. Monsanto Canada, Ltd. 844,114.

Injectable aqueous solutions of chloramphenicol. C. F. Boehringer & Soehne, G.m.b.H. 844,431.

Cyclopentanophenandrene compounds. Laboratoires Français de Chimiothérapie. 843,901.

Derivative of isonicotinothioamide. Chimie et Atomique. 843,756.

From the "Official Journal (Patents)," June 22.

Therapeutic compositions. A. B. Kupferberg and H. O. Singher. 845,193.

Pharmaceutical composition. R. Bellon. 844,904.

Process for the manufacture of water-insoluble salts of polyvalent metals. E. Hustinx. 844,683.

Steroid compounds and their preparation. Merck & Co., Inc. 845,295. 845,116. 845,117.

Granular pharmaceutical compositions and process for preparing same. C. Pfizer & Co., Inc. 844,772.

2 - (N - substituted) - acylamino - 1, 3, 4 - thiadiazole-5 sulphonamides. American Cyanamid Co. 844,946.

Sulphonium compounds. Beecham Research Laboratories, Ltd. 845,021.

Process for resolution of glutamic acid. Ajinomoto Co., Inc. 844,952.

Production of nisin. Aplin & Barrett, Ltd. 844,782.

Fungicidal compositions containing triacetin. Wisconsin Alumni Research Foundation. 845,029.

Water-insoluble tertiary amines. Sandoz, Ltd. 845,220.

9a-halo-1a, 17a, 21-triol-4-pregene-3, 11, 20-trione and 21-esters thereof. American Cyanamid Co. 844,790.

Devices for the artificial oxygenation of blood. Fcrrosan, A.S. 844,881.

Purification of pyridoxine-yielding materials. Vitamins, Ltd. 844,883.

Production of heterocyclic compounds. May & Baker, Ltd. 845,034.

Derivatives of hexachlorotoluene. Velsicol Chemical Corporation. 845,036.

Method for increasing the water-soluble portion of animal muscle protein and obtaining muscle protein extracts. J. A. Benckiser G.m.b.H. Chemische Fabrik. 844,979.

Thiazolidine derivatives. Imperial Chemical Industries, Ltd. 845,248.

Sulphur compounds and bactericidal and fungicidal compositions. E. I. Du Pont De Nemours & Co. 844,816.

Alkylxy- and Alkenyldioxy-Benz [c] Acridine derivatives and methods for preparing the same. Parke, Davis & Co. 844,818.

Amine compounds and a process for the manufacture thereof. F. Hoffmann-La Roche & Co., A.G. 844,827.

Sterilisation process. Deutsche Gold Und Silber Scheideanstalt vorm. Roessler. 844,828.

Aliphatic dicarbamates. Farbenfabriken Bayer, A.G. 844,831.

Pesticidal organic dithiophosphates, their manufacture and products containing them. Murphy Stabilised gibberellic acid compositions and their preparation. Imperial Chemical Industries, Ltd. 844,549.

Powder blending apparatus. H. V. Wilson. 844,668.

British patent specifications are obtainable (price 3s. 6d. each) from the Patent Office, 23 Southampton Buildings, Chancery Lane, London, W.C.2.

CONTEMPORARY THEMES

Subjects of contributions in current medical and technical periodicals.

DRUGS in the treatment of old people. *Brit. med. J.*, June 18.

SYNTHESIS of ascorbic acid in animal tissue. *Brit. med. J.*, June 18.

TOXICITY of vitamin K. *J. Amer. med. Ass.*, June 4.

ACTIVE and passive antitetanus immunisation. *J. Amer. med. Ass.*, June 4.

A DEVICE for continuous measurement and recording of intravascular pH. *Lancet*, June 18.

DRUG-RESISTANT staphylococci in the farmyard. *Lancet*, June 18.

CORRELATION between composition, structure, shape and function of a salivary mucoprotein. *Nature*, June 18.

PREPARATION of pure standard metallic perchlorate solutions. *Nature*, June 18.

CATALYTIC effects in the alkaline oxidation of cellulose. *Nature*, June 18.

USE of solvents containing ethyl iodide in the investigation of phosphorescence spectra of organic compounds. *Nature*, June 18.

SPECIFIC detection of glucose on paper chromatograms. *Nature*, June 18.

CHARACTERISATION of a new purine riboside isolated from *Fusarium* species. *Nature*, June 18.

A PHENYLTHIACARBAMIDE TEST. *Nature*, June 18.

DETERMINATION of dieldrin deposits on sprayed mud surfaces. *Nature*, June 18.

ARAKAWA'S VACCINE, the use of, in the prevention of measles. *Yokohama med. Bull.*, February 1960.

STEROIDS pace search for new allergy aids. *Chem. Week*, May 21.

URINARY ESTROGEN METABOLITES of 19-norethisterone and its esters, *Proc. roy. Soc. Med.*, June 1960.

ZINC SULPHATE treatment of parakeratosis in cattle, *Nature*, June 25.

COMING EVENTS

Items for inclusion under this heading should be sent in time to reach the Editor not later than first post on Wednesday of the week of insertion.

Sunday, July 3

LONDON CHEMISTS' GOLFING SOCIETY, West Surrey Golf Club (Godalming 278). Ladies welcomed.

Tuesday, July 5

LONDON SECTION, ROYAL INSTITUTE OF CHEMISTRY, Parke, Davis & Co., Ltd., Staines Road, Hounslow, Middlesex, at 1.30 p.m. Visit.

Wednesday, July 6

London Section, Royal Institute of Chemistry, Burroughs Wellcome & Co., Wellcome Chemical Works, Dartford, Kent, at 10.30 a.m. Visit.

Thursday, July 7

EAST METROPOLITAN and NORTH METROPOLITAN BRANCHES, PHARMACEUTICAL SOCIETY, Royal Horticultural Society, Wisley, Surrey. Visit.

At last, here is the perfect product for all who love their horses and have their well-being at heart. In the easy-to-apply aerosol pack, Extra-Tail is the complete answer to the sad sight of continuous tail-swishing on a hot day. Just spray your animals' heads and backs for instant protection from flies and other insects—use it in the house, stables and byres too! This is the latest of the Kalium range of products and is one which we believe will be an immediate winner considering the likelihood of another hot Summer and the forecast that we are going to have trouble from wasps this year. Stable size 12 oz.—11/6. Pony size 6 oz.—6/6. Available from Saddlers, Riding Schools and Veterinary Chemists.

For every age and every stage of ability

You can sell an ILFORD camera to every member of a family—now that the Super Sporti has been introduced, and the Sportsman range has been enlarged. Each one is an attractive instrument, and unbeatable value at its price. That is why you can safely recommend an ILFORD camera to any one of your customers—of whatever experience in photography.

ILFORD

ILFORD SPORTI Roll Film Camera

Takes 12 exposures $2\frac{1}{4}$ " square on 120 roll film. Simple exposure settings, zoned focusing, flash-synchronised shutter, and accessory shoe. Retail price £3.17.7

ILFORD SUPER SPORTI

As above, but with three exposure settings and automatic lock to prevent double exposure. "I" and "B" shutter settings. Retail price £5.12.6

Sporti Ever-ready case £1.1.10

De luxe case £1.16.0

ILFORD SPORTSMAN VARIO 35mm Camera

f/2.8 coated lens and three-speed Vario flash-synchronised shutter. Rapid lever film-wind interlocked with shutter setting mechanism. Focuses down to $3\frac{1}{3}$ feet. Direct-vision viewfinder with luminous guide-lines.

Retail price £11.19.6

ILFORD SPORTSMAN PRONTO

Other details as Sportsman Vario, but with four-speed Pronto shutter and delayed-action release.

Retail price £15.15.0

ILFORD SPORTSMAN PRONTOR

f/2.8 lens and other details are standard, but this version of the Sportsman has the nine-speed Prontor SVS shutter synchronised XM, with light-value scale and delayed-action shutter-release.

Retail price £18.17.6

ILFORD SPORTSMAN RANGEFINDER

S.R. TV commercials win first prize in Venice Film Festival!

Competing with productions from all over the world, this year's dynamic Gibbs SR commercials have won the top award for a live-action series in the International Advertising Film Festival at Venice!

This was the only top live-action award won by a British company for television.

Consistently outstanding advertising like this is simply part of the Gibbs operation designed to help you sell.

demethylchlortetracycline...

... but for doctors who want to prescribe the most active tetracycline so far introduced into medicine, it's simpler to write LEDERMYCIN.

LEDERMYCIN demethylchlortetracycline surpasses other tetracyclines in so many ways—lower dosage, greater stability, higher therapeutic blood levels, fewer side effects. LEDERMYCIN maintains effective antibacterial action for as long as 48 hours after stopping dosage—giving added protection for the patient. These are virtues proved in clinical trials and supported by continually increasing prescription in both hospital and general practice.

**Your own
products
processed—the
Ransom way**

Here is your opportunity to share the enviable Ransom reputation—famous throughout the pharmaceutical industry. The House of Ransom serves the wholesale and manufacturing trades only and is an entirely self-contained family business—it is not connected with any other firm in the industry.

A line on your letter heading or trade card will be sufficient to bring you full details of Ransom's Trade Processing Service.

The benefits brought to you by the Ransom standards of processing are good for both your business and professional reputation. Send them your raw materials and the meticulous Ransom standards of quality and uniformity, born of over a century's experience, become a feature of your own processed materials. The Ransom service to the pharmaceutical industry also embraces the processing of proprietaries to your own formulas. This service is complete and carried out in the strictest confidence—from raw material to final packaging.

IT'S THE ALDIS SCREEN

*The perfect
partner for any
projector!*

METAL SLAT BAR

Keeps out dust, protects screen surface when stored, prevents rubbing and tearing.

FINER BEADED SURFACE

Finer beading minimises grain in projected image, and gives clear, sharp pictures.

METAL HANGER

Sturdy and practical design for added strength and rigidity. Screen leveller for uneven floors.

AUTO - LOCK

Permits full adjustability of height, and conversion from square screen for slides to oblong for movies.

BEAUTIFUL COLOURS

Distinctive colour combination used on slat bar, case and plastic parts for overall attractiveness.

These new ALDIS screens are really amazing value! They are beautifully made tripod screens, easily erected in a few moments. The screen surfaces are coated with fine glass beads for maximum light reflection, and the fine grain ensures good resolution and definition. The workmanship and finish is of very high quality.

Never before have such fine screens been available at such low prices.

Demonstrate the ALDIS screens—your customers will realise that it's what they've been wanting to complete their slide show enjoyment.

The first fully automatic blanket ever made in Britain is available now

IT IS CALLED the Monogram Automatic Blanket with *Sleep-Guard*, and it is as different from most of the electric blankets now sold as the Comet is from the Spitfire.

It is an over-blanket, and it is designed to be left "on" all night.

It is the *only* blanket that maintains the exact comfort you need for perfect sleep *all night*, because it adjusts automatically to changes in bedroom temperature.

It provides *maximum* protection against overheating, because its exclusive *Sleep-Guard* circuit shuts the blanket off *automatically* in the event of excessive warmth.

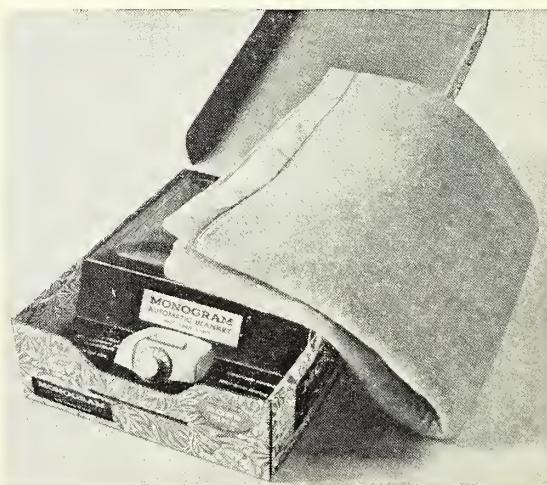

It is the only blanket with such a record of *proved satisfaction*. In America, more than 5 million people sleep under automatic blankets with *Sleep-Guard*.

Advertising for the Monogram Automatic Blanket commences in October. It will include an 8-page, 4-colour insert in the November Reader's Digest, 12 full-page ads. in the London Evenings, 24 full pages in local dailies, and a concentrated campaign of television spots on London and Southern transmitters. *It is by far the largest advertising campaign ever mounted for an electric blanket*, and will reach better than 4 out of every 5 adults in the launch area.

The Monogram Automatic Blanket will be available only in London and the South during 1960, but will be in national distribution by the autumn of 1961.

We honestly believe that it is one of the most exciting products to enter the electric appliance market since the war. And we expect it to sell accordingly.

For illustrated literature describing the Monogram Automatic Blanket in full, and to place your order, write or telephone the Monogram Sales Department.

OUR REF. LH/CP...

YOUR REF.

DATE.

To the Retail Pharmacists,
in the United Kingdom.

Gentlemen,

As you know, the principal function of the Feedrite Baby Feeder is the retention of heat throughout the baby's feed, and the fact that our product enjoys a wide sale is, in no small measure, the result of the co-operation we receive from the Pharmaceutical Profession.

FROM JULY 1st, however, we are introducing the FEEDRITE "EXTRA", which has been specially designed for the greater retention of heat over longer periods and will be particularly applicable, therefore, to night feeding and of enormous value for use when travelling.

The introduction of the FEEDRITE "EXTRA" is NOT as a replacement of the Feedrite Baby Feeder, as we shall continue to market our original product, as hitherto.

Commencing 1st July we are embarking on a nation-wide advertising scheme in the principal women's books, and certain of the National Daily and Sunday Press. This is being supported by a nation-wide liaison with Clinics, where in many cases demonstrations of our new product will be given.

The Feedrite "EXTRA" will retail at 7/11d complete. It is packed in a very attractive carton and is obtainable from all Wholesalers at a price to allow the normal trade discount.

We shall be very pleased to send any Pharmacist a supply of leaflets embracing the Feedrite Feeder, the Feedrite "EXTRA" and the Feedrite Anti-Colic Teat.

In thanking the Pharmacist for his past support we also thank him in anticipation of his support in the future.

Yours faithfully,
FEEDRITE LIMITED,

L. Hayes.
General Manager.

BOOTS' 365 TALCUM

filled by **ALBRO**

Yet another important organisation selects ALBRO machines for high output.

The ALBRO 2-head powder-filler illustrated here is being used by Messrs. Boots Ltd. to fill their 365 Talcum Powder.

Operated by unskilled labour, this machine can fill bottles, tins, cartons or drums of up to 1½ lb. capacity at speeds of up to 3,600 per hour, depending on the size of container.

The exclusive vacuum operation ensures completely dustless filling—is so efficient that specially reduced insurance rates are obtainable when powders of a deleterious or abrasive nature are filled.

Other models are available with outputs of up to 7,200 containers per hour.

Ask for details or a demonstration.

ENORMOUS PUBLIC DEMAND FOR DUREX *Gossamer*

*Sensitol**
lubricant
gives super-
sensitivity

From the first day that DUREX Gossamer was introduced, the public have recognised that here was the super-sensitive protective they had been waiting for. Millions of established DUREX users have already changed to Gossamer. And—even more important—DUREX Gossamer has created an entirely new class of protective user . . . people who had never used protectives before.

This is the real DUREX Gossamer success story. Not only has it held existing customers at a higher rate of turnover, but *it has created an enormous new market with previous non-users to whom the ordinary protective is unacceptable*.

No one could have foreseen the tremendous demand for a lubricated protective. The success of DUREX Gossamer has proved that it exists—and will grow week by week.

Make sure you get your share of this profitable business. Keep your stocks at a sufficient level to meet the growing demand, and display a shelf strip so your customers will know you sell DUREX Gossamer!

★ *The secret of DUREX Gossamer is Sensitol—an exclusive "non-wet", "non-messy" lubricant discovery specially developed to increase sensitivity.*

*Put this discreet perspex
shelf strip on display*
